

1. Architecture Value Scorecard

What is it?

The Architecture Value Scorecard guides the assessment of initiatives for their architectural impact and value. The Scorecard allows us to align efforts towards our desired future architectural landscape.

1. Architecture Value Scorecard

Why?

- Provide an easy way for both initiative owners and the EASG to align efforts with our future architectural goals and structure.
- Clarify what is architecturally important to UW.
- Provide a single point of reference to distributed roadmaps and future state documents and their stewards.

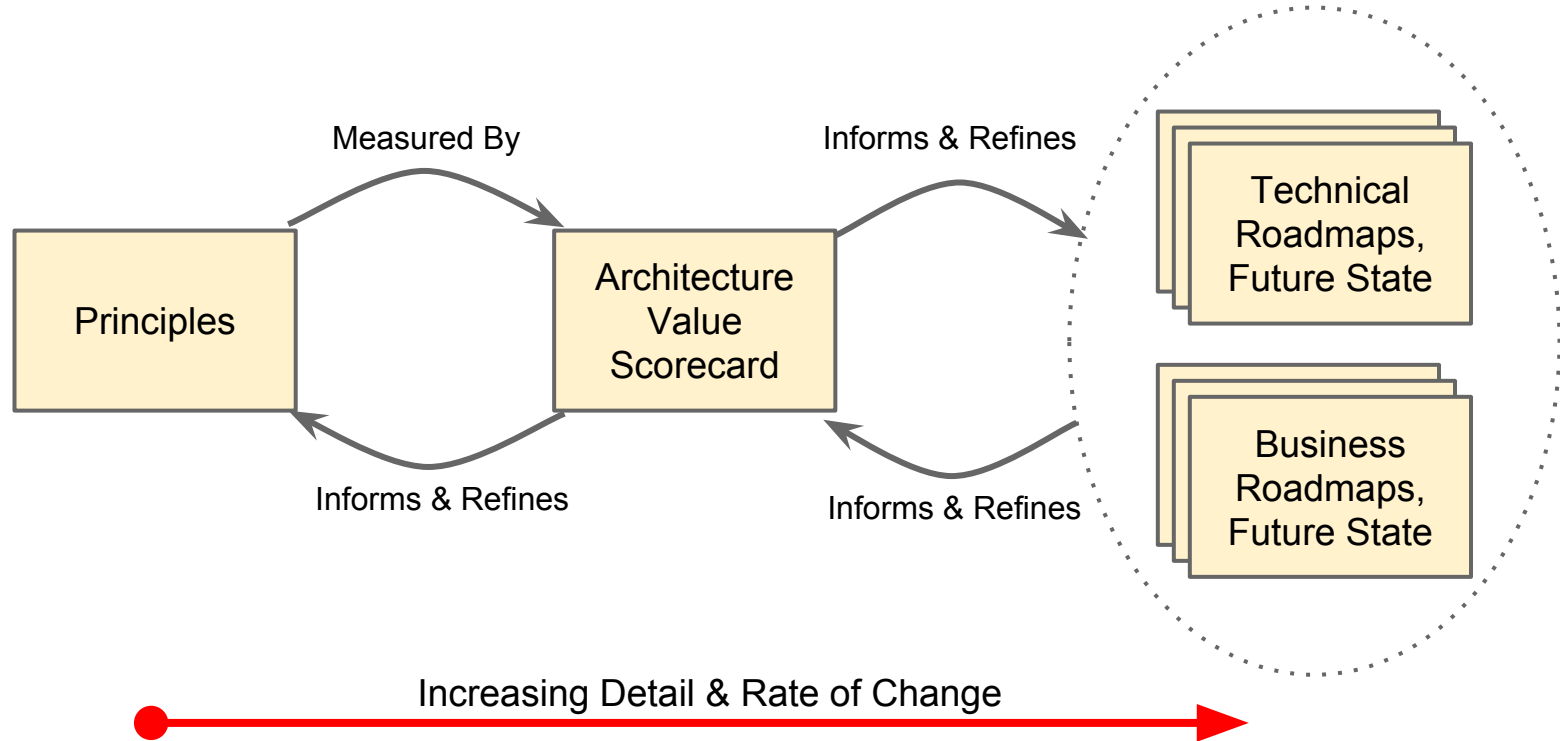

1. Architecture Value Scorecard

It focuses on measures in the following areas:

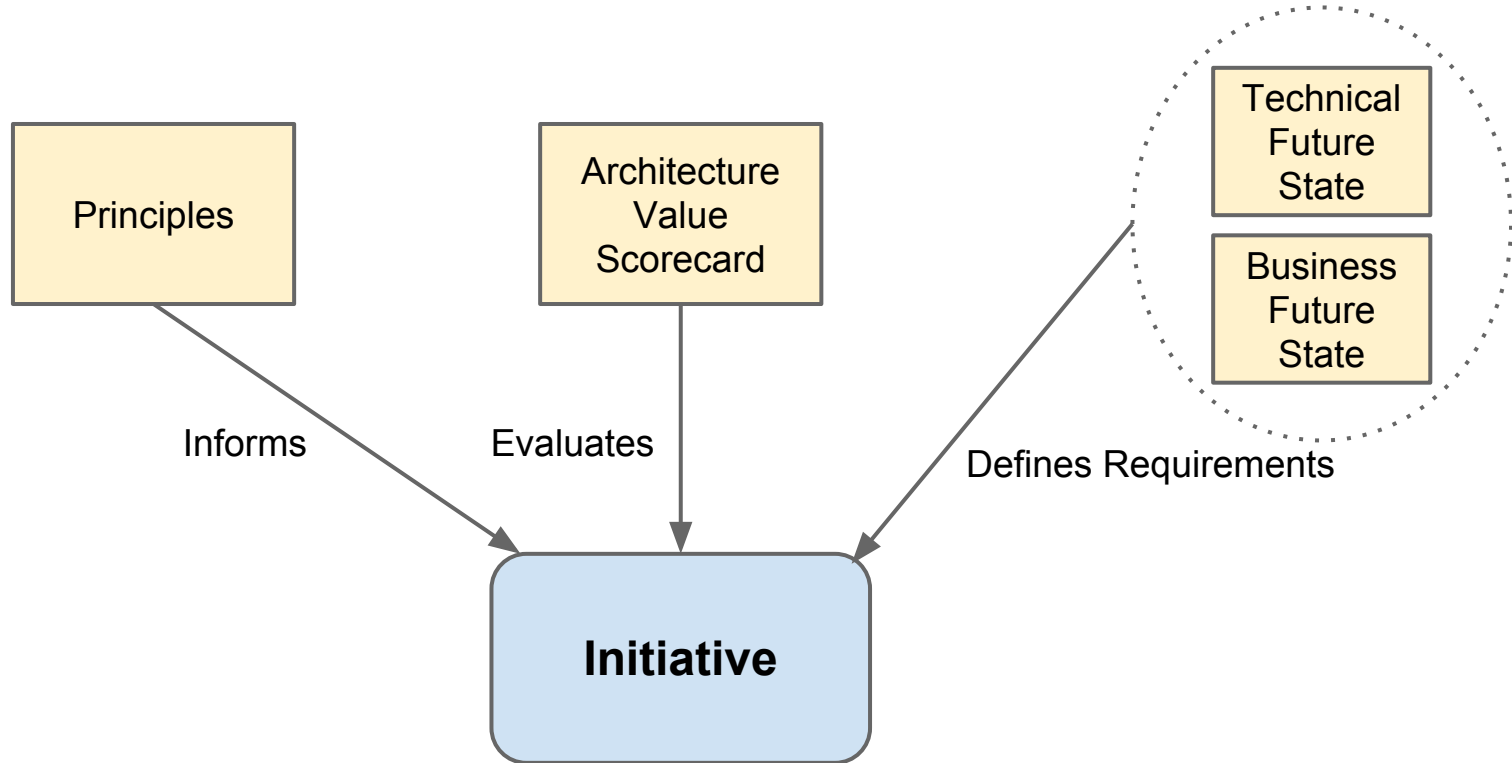

- Business Alignment
- User Impact & Usability
- Information and Data Architecture
- Technical architecture
- Risk management

1. Architecture Value Scorecard

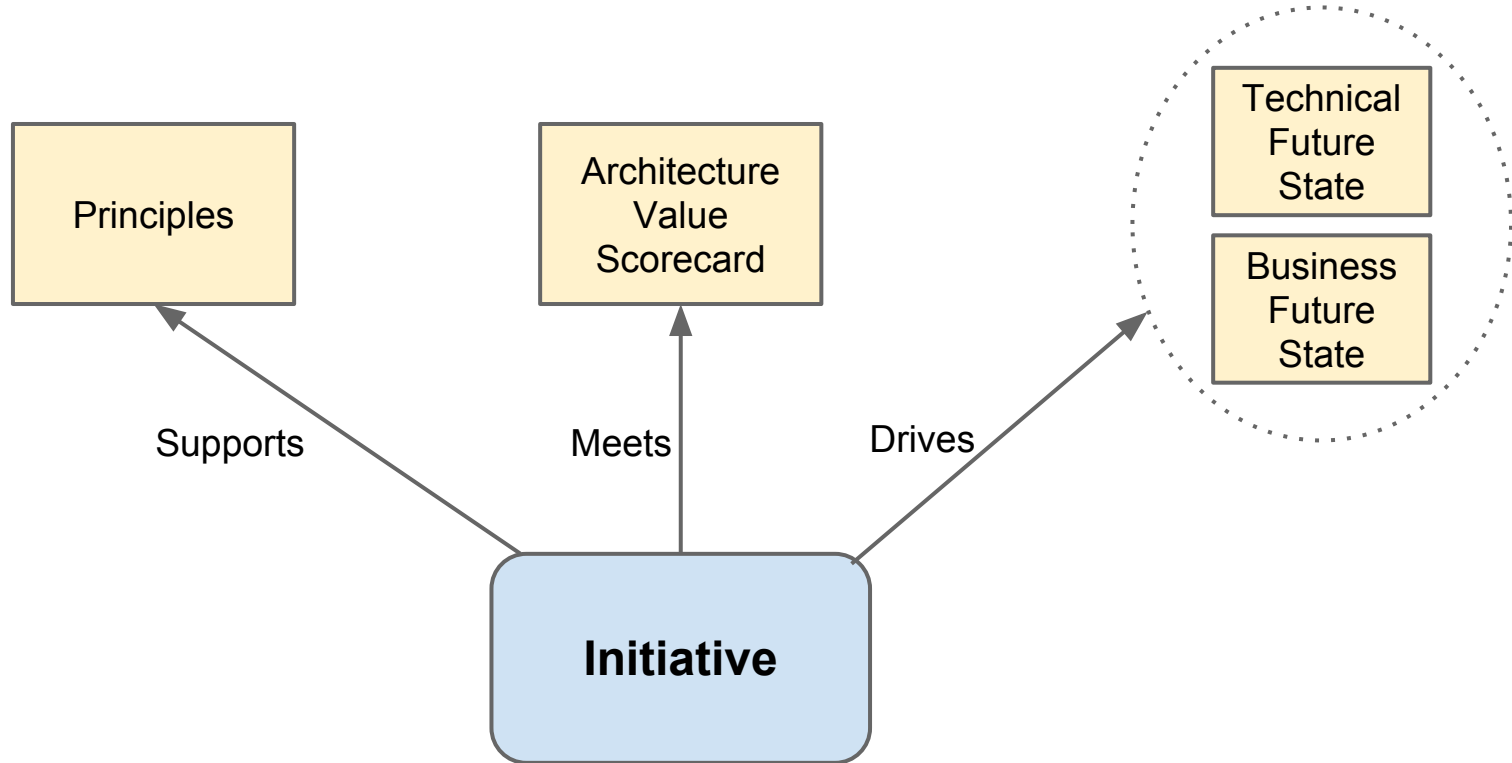

Relationship between the Principles, Scorecard and the various roadmap and future state documents.

1. Architecture Value Scorecard

What does the future look like?

- Sponsors and stakeholders review the principles and find the appropriate Scorecard metrics at the earliest stages of an initiative.
- They reach out to the Scorecard metric stewards to help align their effort to the future vision.
- As the initiative moves forward, the Project Review Board measures the effort against the Scorecard.

1. Architecture Value Scorecard

What do we gain?

- Because of early alignment and realignment, initiatives slowly drive us towards our desired future state.
- We understand the technical/architectural debt we are taking on when we choose to go against the Scorecard.
- Our architectural goals are met more quickly and holistically which allows us to be more agile and operate more efficiently and transparently.
