# Converting Volcano Seismograms into Music - Why & Who?

- To make volcano seismograms audible
  - To correlate seismic stages with melodies and/or sounds
  - To discover the “signature tune” of an eruption
  - To save human lives!
- 
- Began in Italy (Mount Etna) in 2001
  - Ecuador became involved (Mount Tungurahua) in 2006
  - Philippines joined in (Mts. Mayon & Pinatubo) in 2008/9

# Converting the Seismogram to Music

- Digital sound synthesis is computationally demanding
- Grids provide the necessary computing power and distributed data storage
- The **EGEE**, the **EELA** (and **EELA2**) and the **EUMEDGRID** grid infrastructures were used on **GEANT**, **EUMEDCONNECT** and **RedCLARA** backbones:
  - More than 30,000 computer processors across Europe, Latin America and lower Mediterranean involved.
- Researchers share information, data, experiences and knowledge.

# The Mountain: From Science to the Arts

- The Mountain by CityDance Ensemble: world premiere 10-11 Sept 2009, The Kennedy Center for Performing Arts, Washington DC, USA
- Music by Domenico Vicinanza (based on seismograms of 4 volcanoes: Etna, Tungurahua, Pinatubo, Mayon), Choreography by Jason Garcia Ignacio
- Info: [www.volcanodance.org](http://www.volcanodance.org)
