Quixotic shepherding of API-led connectivity

The University of Auckland API Programme

A discussion with the Itana API/Governance Working Group

14 April 2022

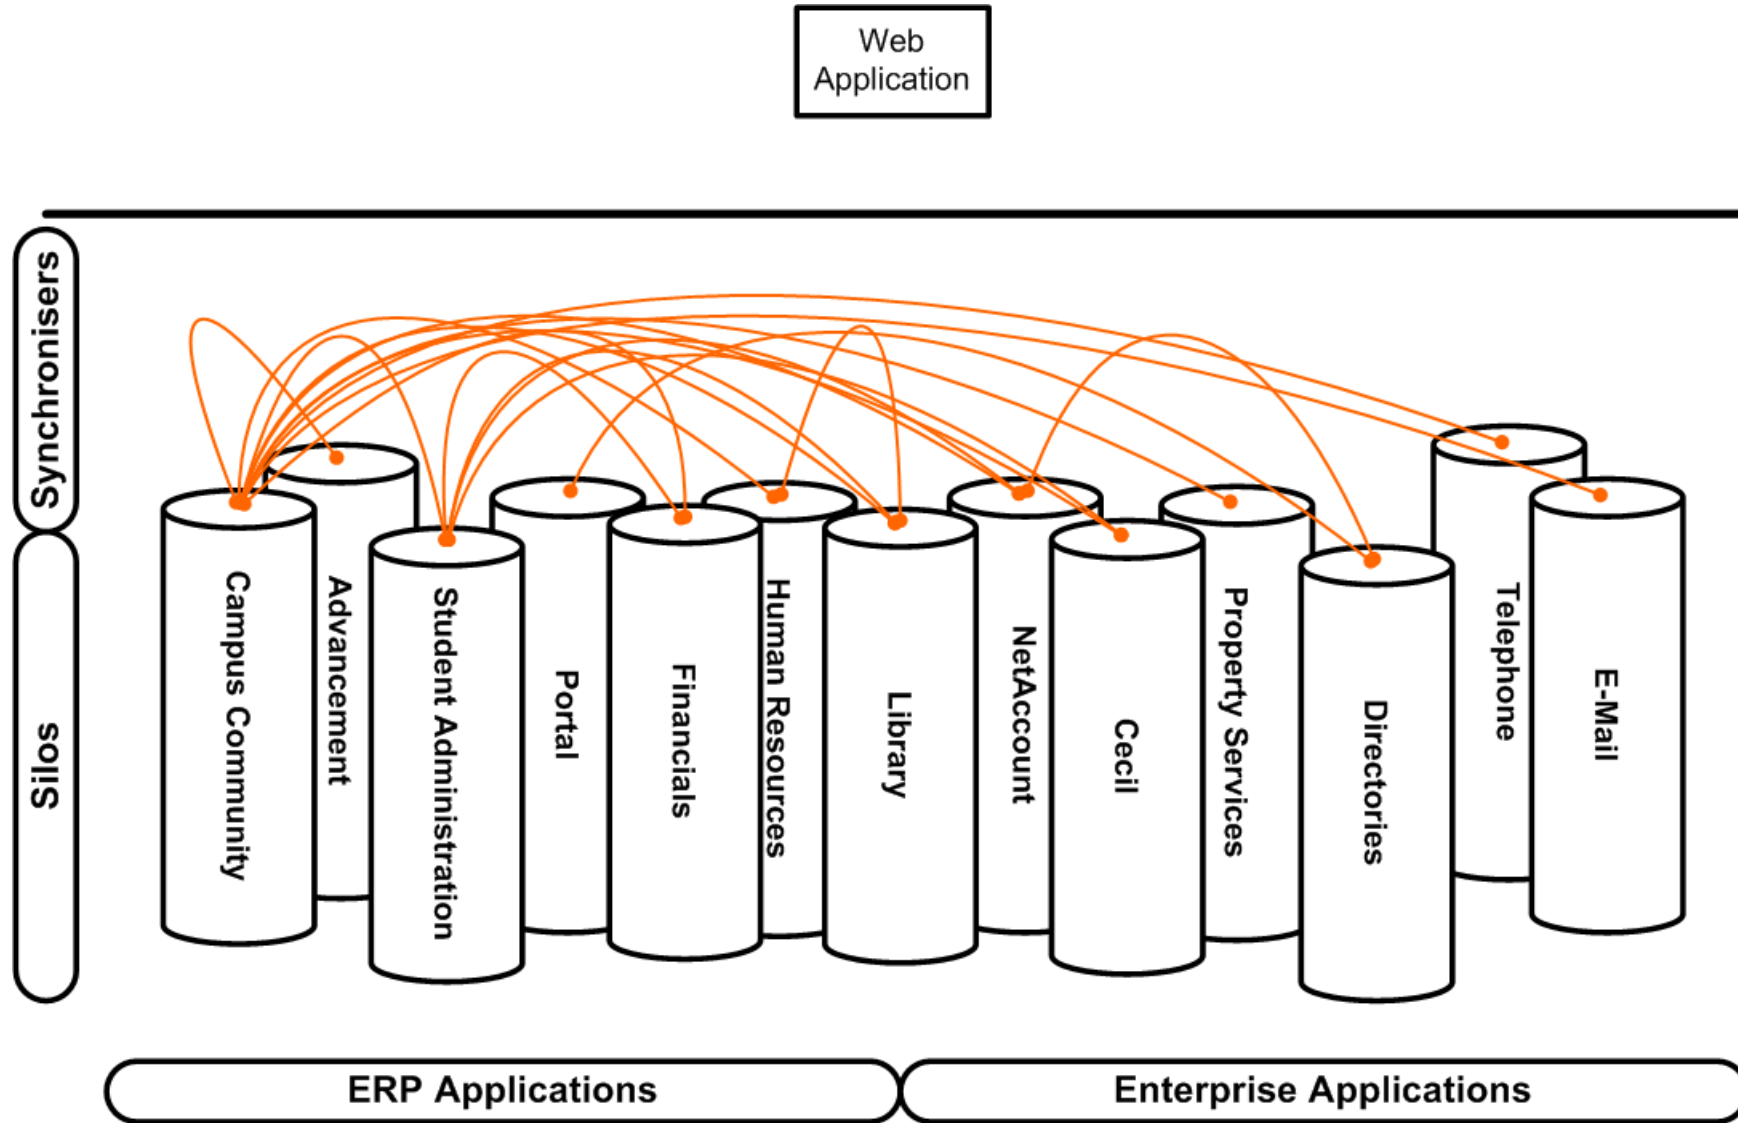

Proposition

- The University of Auckland embarked upon an API Program more than a decade ago, and success has proven elusive --- this discussion outlines the organizational waxing and waning of enthusiasm, capability, and appetite, and paints a picture of necessity-driven hope for an API-centric future

Schedule

- Ancient History
- Growing beyond service-oriented architecture
- Imagining open connectivity
- Beginning
- Struggling
- Restarting

Difficulty Accessing Enterprise Data

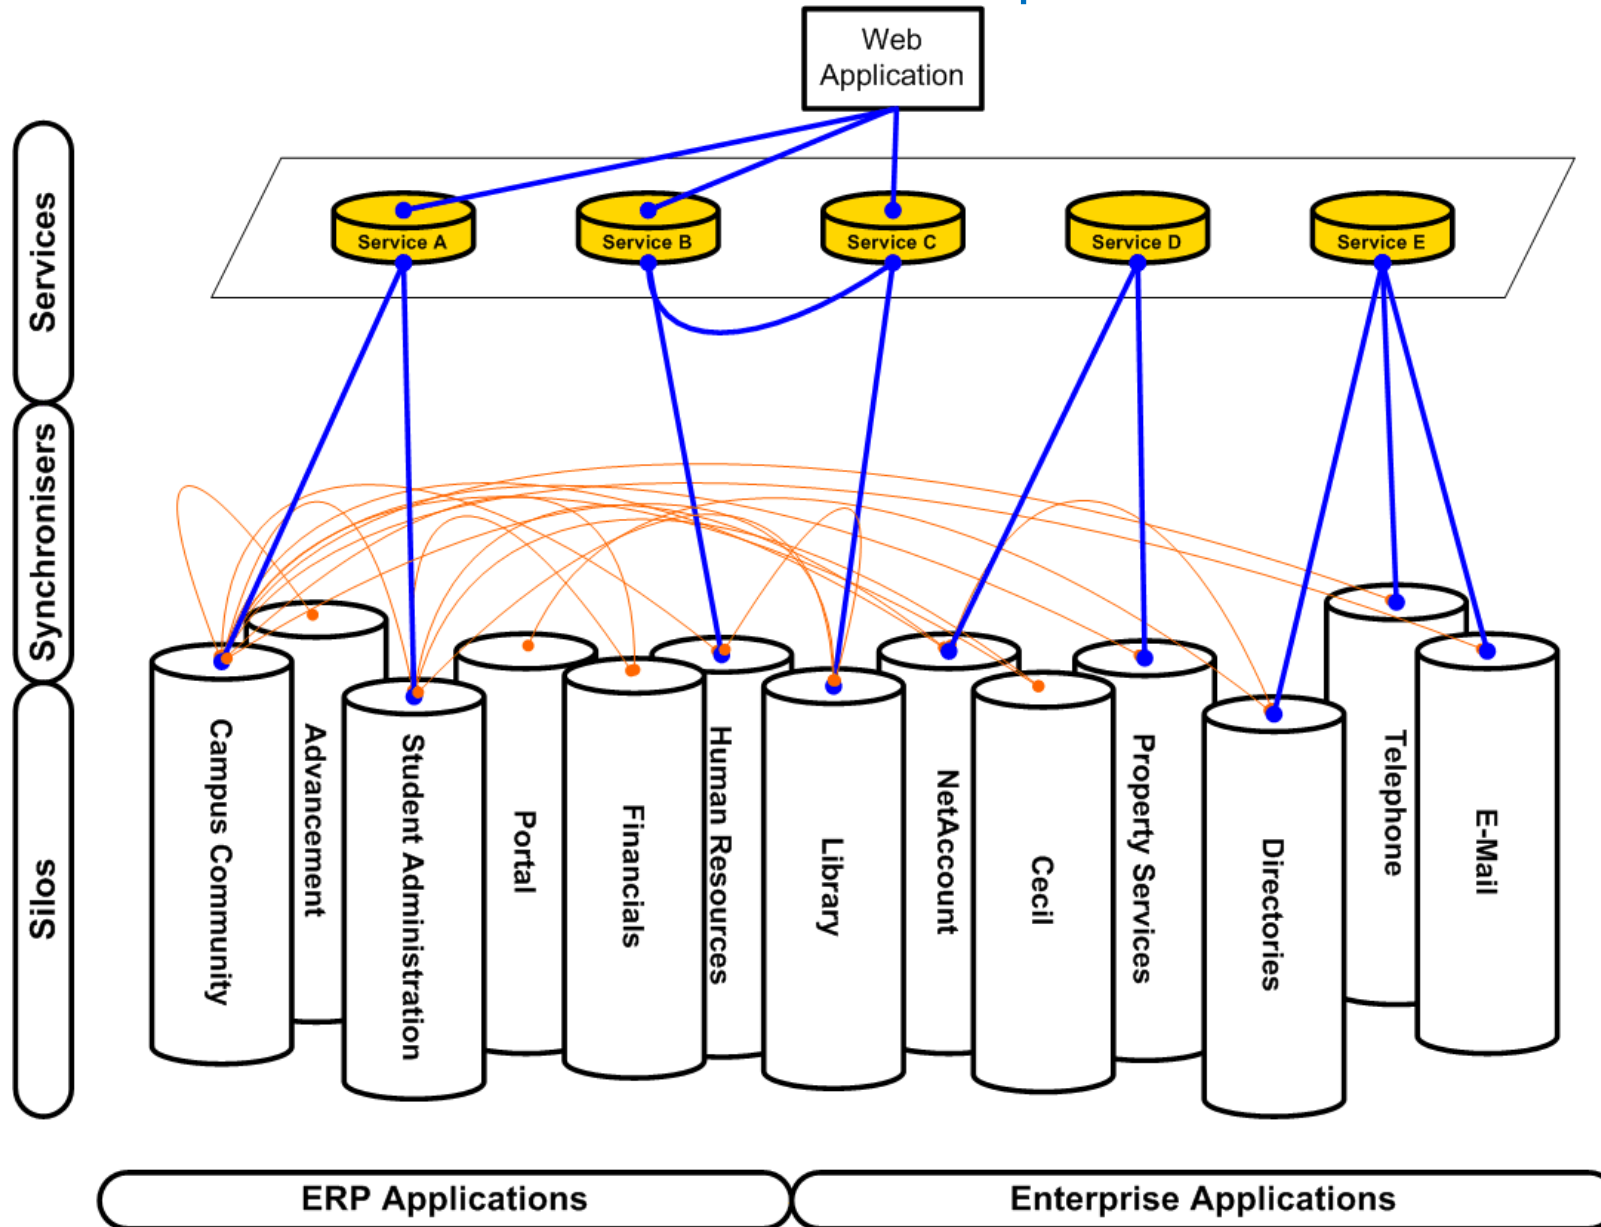

A Dreamy Vision

- Automated provisioning and deprovisioning.
- Encouraging *boundaryless information flow* between external-in, internal-in, and external-out aspects of the enterprise.
- Rapid deployment of high-quality Web applications.
- Enabling workflow.

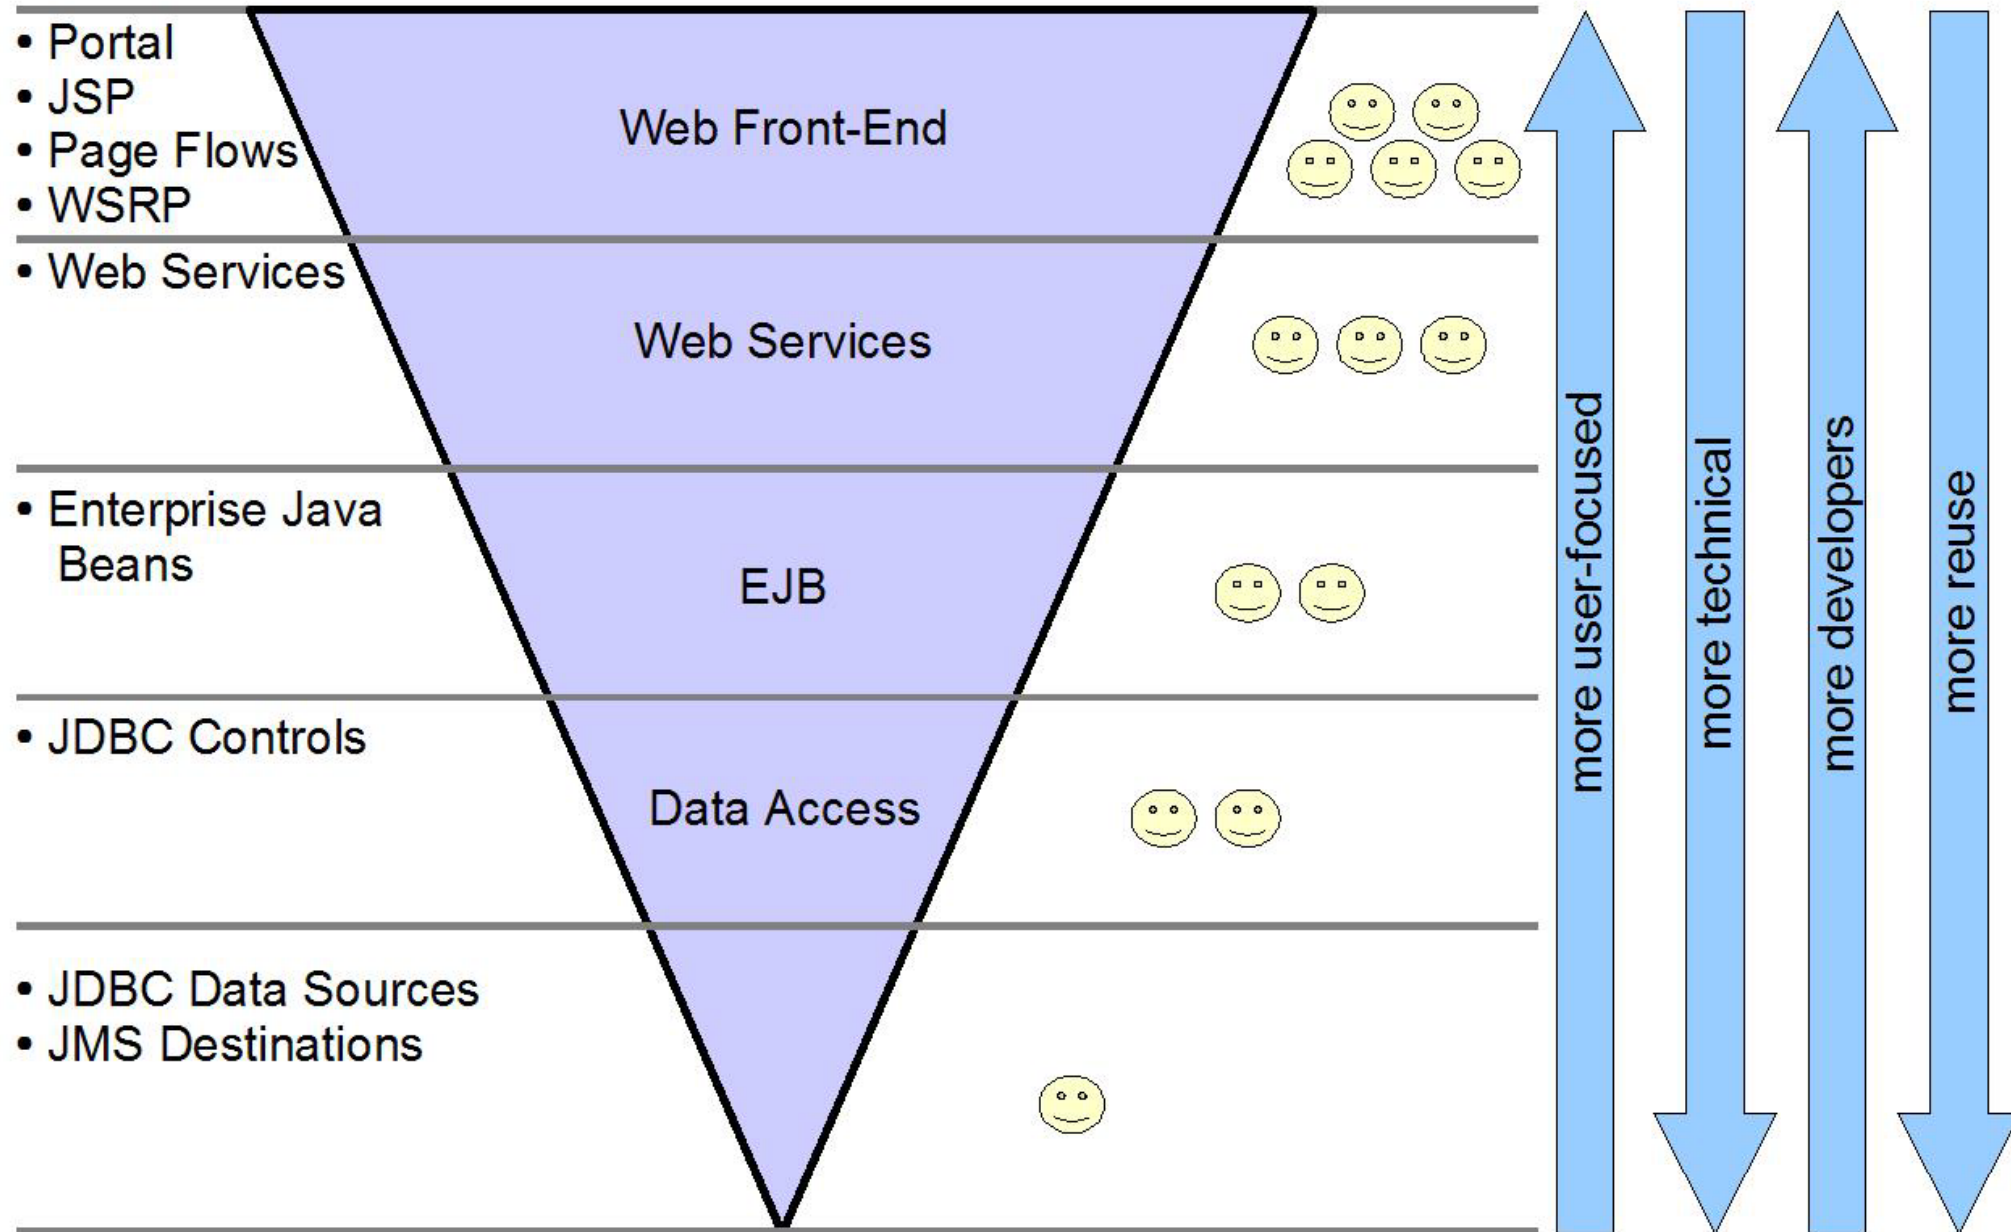

Improved Access to Enterprise Data

The (Old) Inverted Triangle Model

The Solution!

The Solution!

ORACLE®

FUSION MIDDLEWARE

Motivation

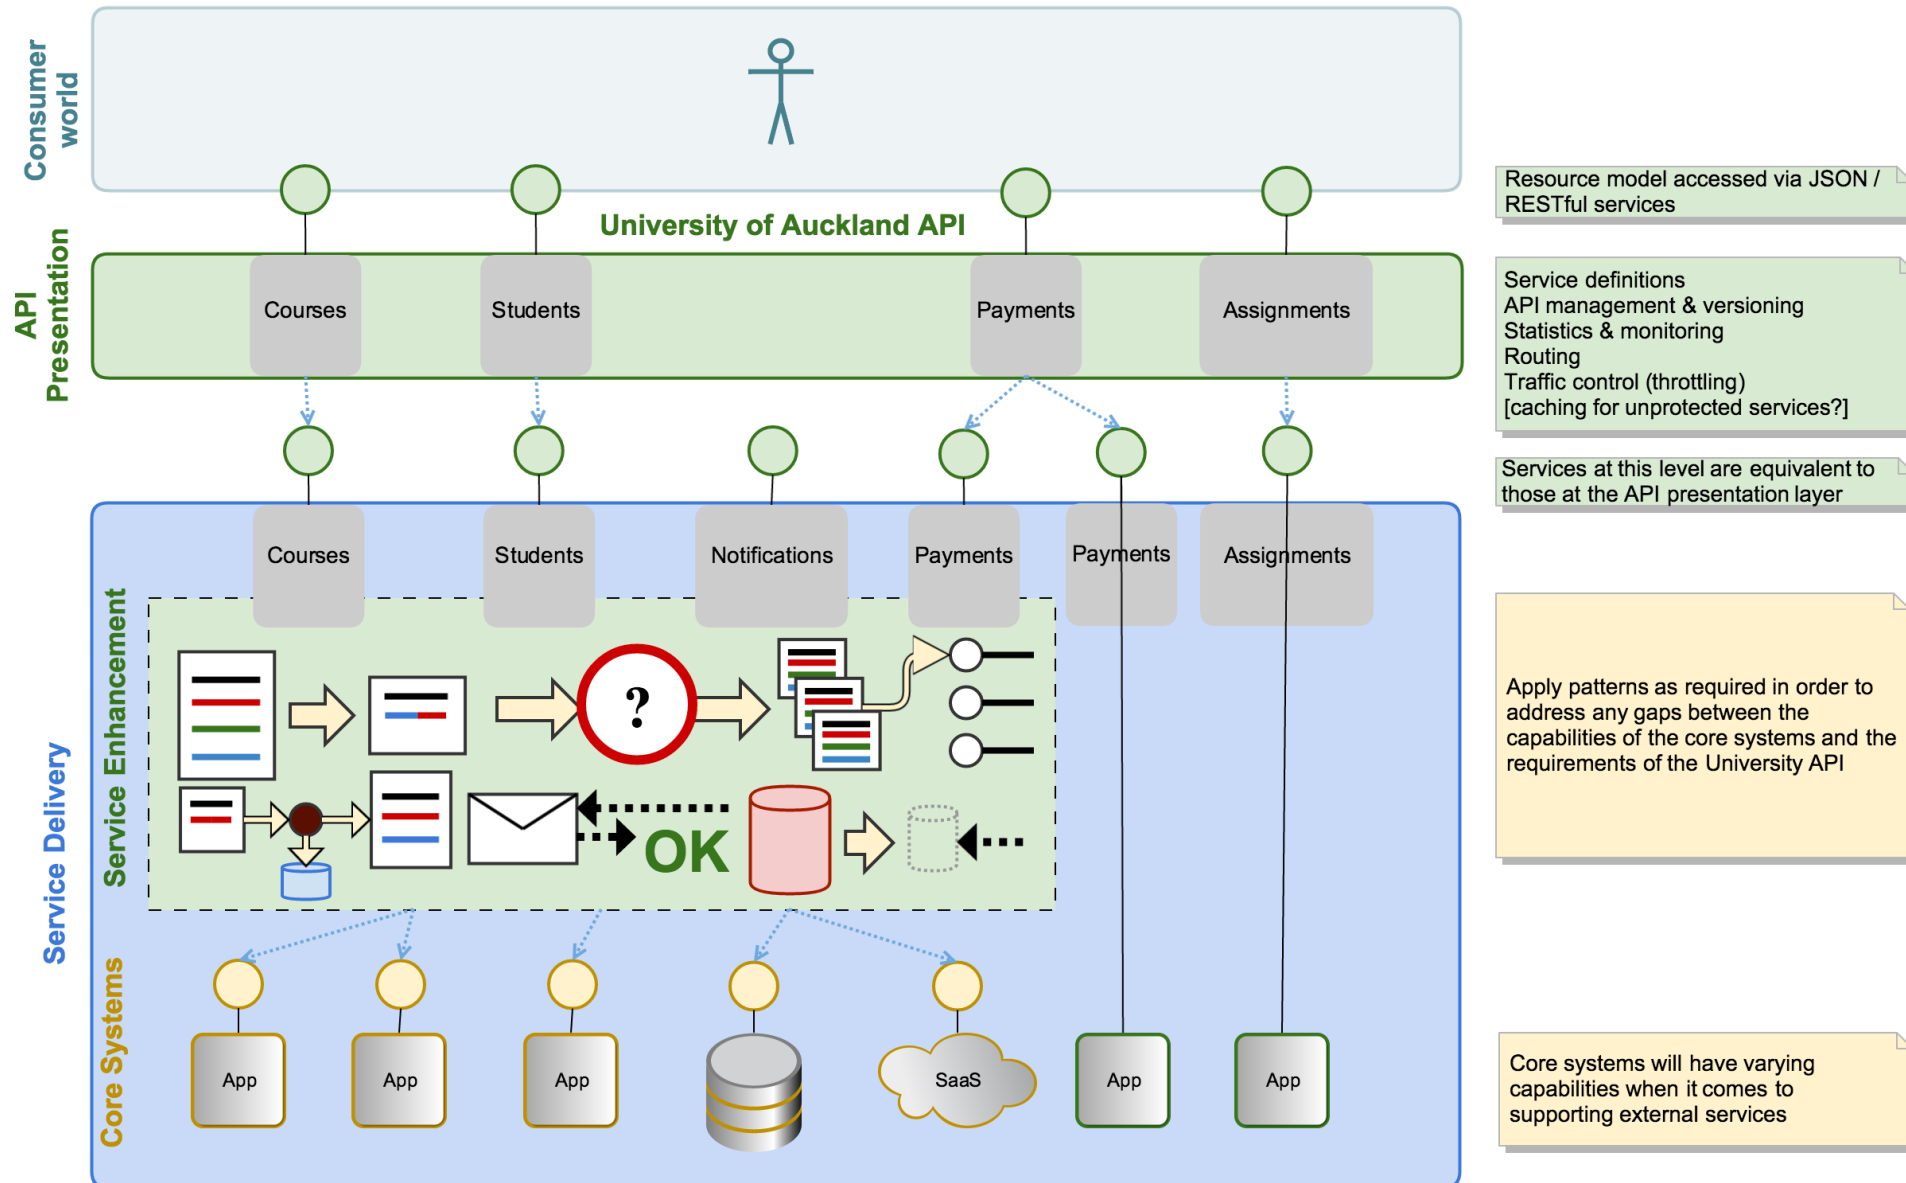

- The University of Auckland wishes to provide an easy-to-use and beautiful API to enable wider consumption of its services, innovation by students, and faster and better application delivery and integration services.
- The University API will provide an effective, efficient core of excellent services that will expose data and functionality from throughout the University's business domains.

Drivers

The University API will enable and enhance the University's ability to:

- *Integrate* data across its business applications, both those on-premise and those consumed on-demand.
- *Automate* its business processes by making available services that expose data and functionality from its core enterprise applications.
- *Develop* bespoke web applications rapidly that are underpinned by a reusable, well-engineered API.
- *Innovate* through partnerships with the student body and citizen developers to deliver brilliant ideas and meet the needs of the wide range of mobile-device application ecosystems.
- *Expose* data and functionality about the organisation safely and securely, making the University more accessible both to itself and to its business partners, researchers, employees, alumni, and the wider constituency.

Selected Impediments

- Technology Leadership
- Loss of key influencers
- Information & Technology Operating Model
- Realities of the API Production Model
- Project-Based Funding Models
- Enterprise Architecture
- Information Architecture
- Organizational-Cultural Inertia
- Heavy Legacy
- Deep Backlogs

Our Current State

Five Dimensions of API Strategy Maturity

Business Alignment

Developer Enablement

Measuring Business Value

API Life Cycle Management

Communications

Welcome to Research Circle

What are the top 3 business goals or objectives of your organization's APIs?

- Standardization of interfaces
- Internet of Things (IoT) use cases
- Better customer experience
- Reusability of integrations
- Automation
- Data monetization
- Enable mobile apps
- Multi Experience Development
- Integration between various platforms/apps/systems
- Digital business/transformation/services
- Access to Data
- Better time to market
- Interchange data/services with partners
- Other, please specify
- Unsure

Te Rautaki Matihiko | The University of Auckland Digital Strategy

- *Accessible Services*: We will provide a suite of valuable and valued well-described and discoverable services through a platform that enables people to access safe and robust services that expose the data, digital content, and functionality to which they are entitled. Achieving this is a digital priority for the Business Solutions IT Capability Plan.

API Coverage and Value

HIGHER EDUCATION DATA REFERENCE MODEL

HIGHER EDUCATION BUSINESS MODEL CANVAS

HIGHER EDUCATION BUSINESS CAPABILITY MODEL

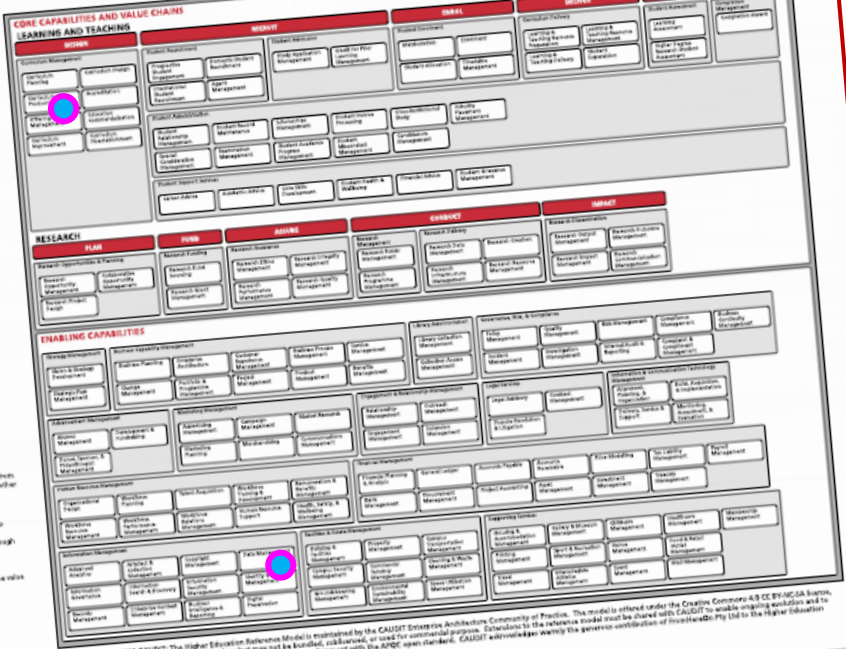

DESCRIPTION
The Higher Education Business Capability Model describes a standard set of Business Architecture elements relevant to higher education. It can be used as a reference for Business Strategists, Enterprise Architects, and Technology Strategists to analyse the existing (current) business architecture, needs, and challenges. Starting alongside the accompanying Business Model Canvas, the Business Capability Model articulates the core capabilities for higher education and their underlying business capabilities.

UNDERSTANDING BUSINESS CAPABILITIES
A capability model supports the development of strategy by viewing the business as a collection of capabilities that act in response to the requests of the business environment. This model shows WHAT the organization is capable of doing to provide the business capabilities within the wider business context of the business, not just within the wider business context of the business. It also assesses the underlying business capabilities of People, Process, Information, and Technology necessary to deliver a diverse range of services to achieve a specific business objective. The capabilities represent the realization of an institution's strategy.

USAGE
The Business Capability Model serves as an enabler for assessing current capabilities such as strategic importance, maturity, current performance, operational and financial, and operational efficiency. It provides a shared view of the organization with flexibility from business objectives through to the infrastructure, technology, and other resources required to support them.

MAJOR COMPONENTS
Typically an ORGANIZATIONAL STRUCTURE model is included to provide context for the scope of the model. VALUE CHAINS capture how the institution generates value through Learning & Teaching and Research. CORE CAPABILITIES that directly support the Value Chain are organized under the relevant Value Chain Segment. ENABLING CAPABILITIES support the core capabilities across the value chain and keep the institution running.

Version 2.6.0 © 2021 CAUDIT. The Higher Education Reference Model is maintained by the CAUDIT Enterprise Architecture Community of Practice. This model is offered under the Creative Commons 4.0 CC BY-NC-SA license and may be used freely by educational institutions but may not be modified, redistributed, or used for commercial purposes. Extensions to the reference model must be shared with CAUDIT to enable ongoing evolution and to realize benefits to the wider community. Elements of this model have alignment with the JISC open standard, CAUDIT acknowledges with the generous contribution of Inverclyde Piv Ltd in the Higher Education Reference Model. CAUDIT Higher Education Reference Models

Version 2.6.0

Offered for use under the Creative Commons 4.0 CC BY-NC-SA license

01 October 2021

This readme accompanies the "Higher Education Reference Models" distribution, the "HERM", which consists of various files bundled into a ZIP archive.

The "HERM" consists of three major components:

1. Business Capability Model
2. Business Model Canvas
3. Data Reference Model

Supporting information, context, and opportunities to be involved in the future evolution of the HERM are available from:

- * CAUDIT Enterprise Architecture Community of Practice <https://caudit.edu.au/>
- * UCISA Enterprise Architecture Special Interest Group <https://www.ucisa.ac.uk/>
- * EDUCAUSE ITANA Enterprise, Business, & Technical Architects Community Group <https://www.educause.edu/>

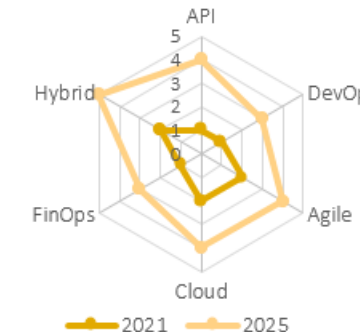

The ZIP archive contains the following files:

- == Business Capability Model ==
- HERM-BCM-V260-model.pdf // poster
 - HERM-BCM-V260-catalogue.xlsx // catalogue of descriptions
 - HERM-BCM-V260-changelog.xlsx // changelog from previous version
 - HERM-BCM-V260-archimate-beta.archimate // beta version ArchiMate
 - HERM-BCM-V260-model.vdx // beta version Visio VDX
 - HERM-BCM-V260-model.vsdX // beta version Visio VSDX
