Federation Proxies Working Group

Join the Federation Proxies Working Group

September 14, 2023: The InCommon Technical Advisory Committee is charting the Federation Proxies Working Group to propose enhancements to InCommon policies and agreements to address specific concerns that attach to Federation Proxies (FPs):

- They may onboard services that otherwise would need their own membership agreement with InCommon.
- They may enable a mission not entirely aligned with that of InCommon.
- They may profit monetarily by selling their federation access to other services.
- Their proxied services need not share the same requirements for identity attributes and thus data minimization may not be realized.
- They need not provide transparency of the proxied services available to current and prospective InCommon Participants

This group is open to all InCommon community members. Please contact Keith Wessel (kwessel@illinois.edu) with any questions or to join the group.
