InCommon Shibboleth Workshop Series

The InCommon Shibboleth Installation Workshop provides attendees with technical installation and configuration experience with Shibboleth, including Identity Provider (version 3) and Service Provider. Developed for organizations new to Shibboleth, or for individuals assuming Shibboleth responsibilities at organizations with existing deployments, the course will let you:

- Install a prototype Shibboleth identity and service provider in a CentOS or Windows virtual machine environment.
- Discussion of next steps towards configuring and running the software in production.
- Learn about integration with LDAP directories and selected packages, as well as advanced topics.
- Hear about the baseline practices for using Shibboleth as part of federated identity management

Upcoming Workshops	Date	Location
UMBC	April 30 - May 1, 2019	Baltimore, Maryland

Knowledge of identity management concepts and related implementation experience is strongly recommended.

The child pages contain specific documentation, much of which is legacy. Please use the most modern OS distribution available to you in your production deployments.

An example metadata file for a local federation is available at <https://www.testshib.org/metadata/testshib-providers.xml>.
