

# The Collaboration Platform

## What is the Collaboration Platform?

The Collaboration Platform provides a self-service system for community members to create and manage a collaboration (such as a working group). Collaboration resources include a wiki space and an email list. Collaboration leaders and Internet2 liaisons can add and remove collaboration members and manage access to these resources.

This platform leverages the [InCommon Federation](#) and uses [COmanage](#) and [Grouper](#) to manage the registry and permissions. Collaboration leaders will use the Grouper interface to manage access to their working group or other collaboration.

## Are You New to the Platform?

If you have not yet registered for access to the new platform and spaces.at.internet2.edu, please [proceed through the self-registrations process](#).
