

Example Base-Level MFA Technologies

Please add your suggestions for this list of widely-deployed MFA technologies to this list. We're primarily looking for classes of technologies (*e.g.*, smart phone app or key fob), but feel free to specify vendors or products, if you think they warrant individual mention.

- Second factor only (used in conjunction with username/password)
 - Duo
 - OTP tokens (Do we care if these are hardware or software? Does this include SMS codes?)
 - U2F
 - Mobile app (Duo, Google Authenticator)
 - Telephone callback (IVR)
- Multi-factor tokens
 - PKI with PIN or passphrase
