

Agenda June 13

Status update:

We currently have 10 responses. See <https://spaces.at.internet2.edu/display/itana/Survey+respondents>. I'm still working on tabulating the results

More in the works?

1. Rich has reached out to Jason Armbruster at CSU and we should be able to interview him
2. Scott, any progress with:
 - a. Marina Asinov at UC Irvine (the UC Peoplesoft integration project)
 - b. Tom Barton in Chicago

Analyzing the results

How should we proceed?

I've started a sandbox called "Survey Themes" as a placeholder for unstructured observations: <https://spaces.at.internet2.edu/display/itana/Survey+Themes>

Any other ideas/approaches??

Surveying products

Back at the beginning of the project we said we would also survey product managers of products that claim to be SOA enabled. The original list was just community source products (Kuali, Sakai). We could easily extend this to include Peoplesoft and SAP. What do you think?
