

Grouper loader logs

- [Wiki Home](#)
- [Download Grouper](#)
- [Grouper Guides](#)
- [Community Contributions](#)
- [Developer Resources](#)
- [Deployment Guide](#)

This screen allows you to see loader logs for a loader group. You need READ on the group and the ability to see the loader tab (see [Grouper loader on UI](#) for details). This is in v2.3.0 ui patch #17. Note, this shows logs across all nodes running the grouper daemon since these logs are stored in the database

Access the loader logs screen

To see this screen, select the Grouper loader tab under "More" on a group screen.

Then select "View loader logs" in the "Loader actions" button.

Home > Root > test > testLdapSimple

testLdapSimple

Loader settings

Loader actions ▾

This group has loader configuration

Source type	LDAP pull the members from an LDAP server. Can be SQL or LDAP
Loader type	LDAP_SIMPLE loaded from LDAP filter which returns subject ids or identifiers. Can be LDAP_SIMPLE, LDAP_GROUP_LIST, or LDAP_GROUPS_FROM_ATTRIBUTES

Filter

With the filter you can refine your search. You can search for records that were started in a certain range, ended, last updated, etc. Note, you can put various formats in the timestamp fields. e.g.

```
yyyy-mm-d  
yy-mm-dd h:mm  
yyyy-m-d hh:m:s  
yyyy-m-d hh:m:s.xxx
```

If the job loads multiple groups, you can see the subjob loader records too.

You can look for certain statuses.

By default it will display 400 rows but you can change that number (but there is a configured max which is 5k)

Home > Root > test > testLdapGroupsFromAttributes

Screen help

You can hover over the column headers or the filter labels to get more information on the meanings.

Grouper loader logs for simple jobs

For simple jobs (jobs that load one group), for LDAP or SQL, you will see the logs (one per run), for that loader job
