Cloud Scorecard

Welcome to the NET+ Cloud Scorecard wiki page.

The working group released a final report below and invites participants in the second phase of the project as we develop the scorecard online presence and work with cloud service providers on a pilot. If you would like to join this group, please contact Tara Gyenis.

About the Cloud Scorecard:

Based on community feedback, Internet2 is developing a cloud services scorecard to help our members assess cloud services for compliance with higher education standards and needs. Using standards and best practices developed within the research and education community over the past 25 years, the scorecard will be a self-assessment completed by a vendor. Institutions can use the scorecard standards in RFPs and also to benchmark or evaluate services against key criteria. This cloud scorecard will complement existing capabilities and efforts within the Internet2 NET+ program. The goal is not to create new methods or standards for evaluating cloud services, but to provide a way of collecting vendor responses to their degree of adherence to existing standards and practices that the community deems important.
