

CManage Registry Technical Manual

Welcome to CManage Registry

CManage Registry is a tool for identity enrollment and lifecycle management of people associated with your organization. Suitable for small collaborations with tens of people or large universities with hundreds of thousands, Registry allows you to organize complex identity data from multiple sources to create a single view of a person. This resource contains the technical manual and documentation for CManage Registry.

COmanage is the set of products that provide the Identity Management facilities for the COmanage platform. Deployers of a COmanage instance can select and customize only those products that make sense for their environment. This technical manual is targeted towards the administrators of a COmanage instance as well as application developers.
