New person from Guest / Self Registration

Narrative

1. A user accesses an institutionally provided Guest / Self Registration application to register guests, affiliates or other members of the population that are not sourced from institutional sources of record.
2. The user provides an institutionally required set of demographic and contact data.
3. The institutional Guest / Self Registration application invokes the Person Registration and Update Service either via REST API calls or by inserting Person Update messages into the Person Update Queue
4. Remainder of registration follows the same flow as in New Person from Institutional Source System.
