

Grouper external subjects in the UI

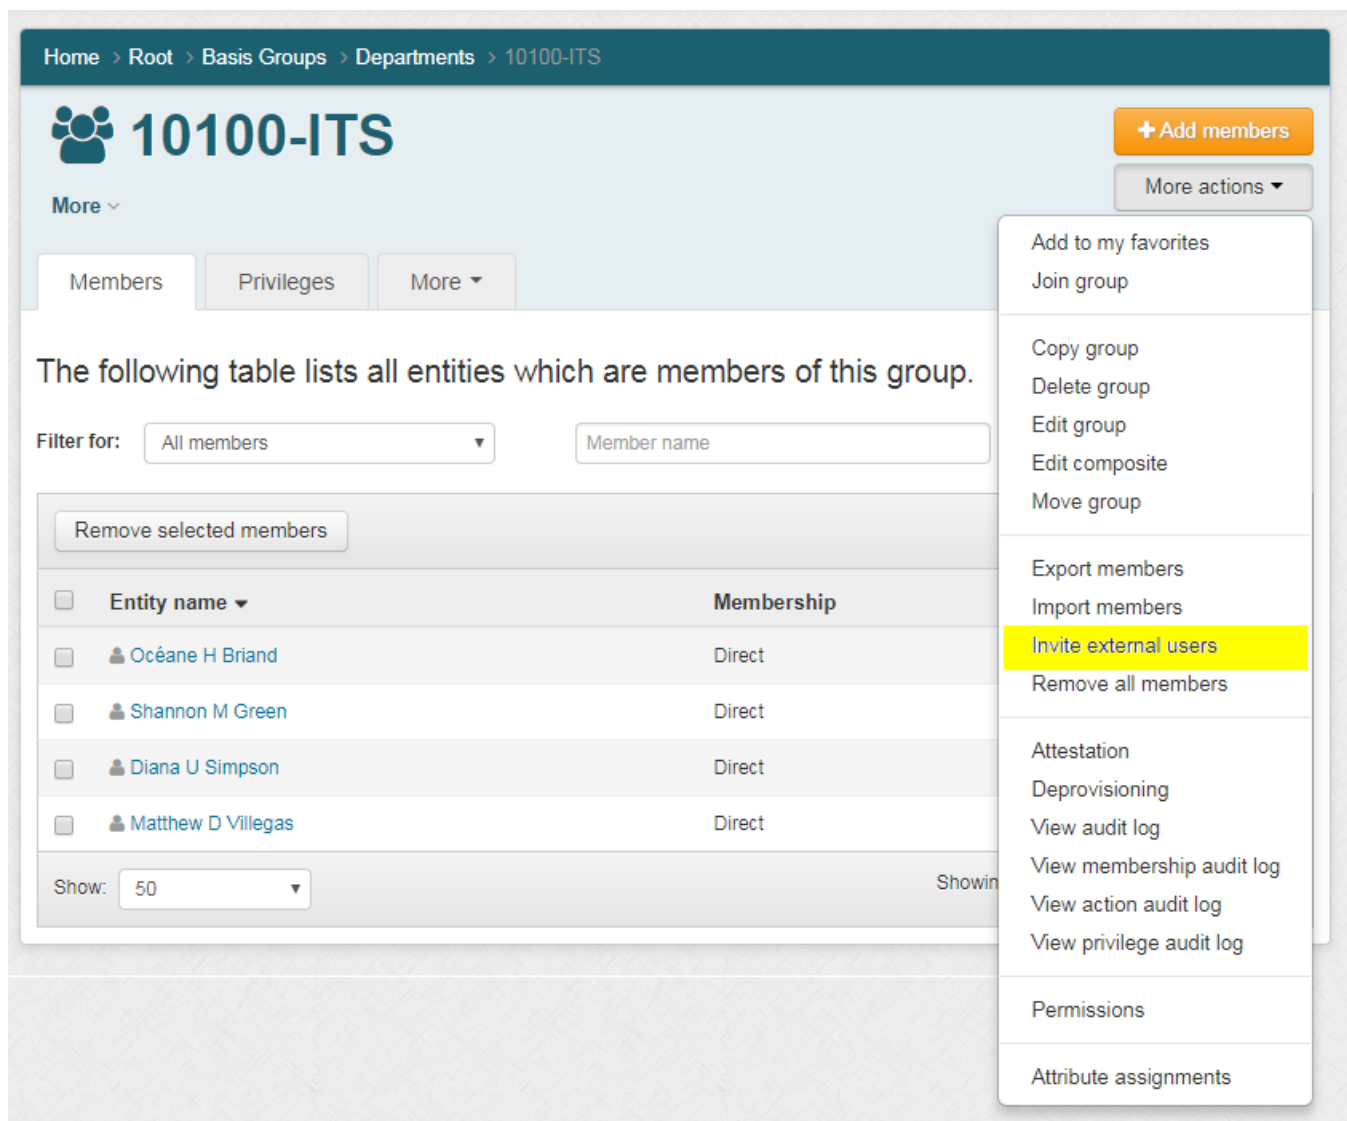

URLs and servlets

The self service functions are at a distinct `/grouperExternal/public/*` URL, so that external users can be protected by a Shibboleth or other separate authentication system, and the rest of the UI can be protected by a local single sign on system. Or the UI can be deployed twice at different URLs. The URL of the external part is e.g.

<http://localhost:8090/grouper/grouperExternal/public/UiV2Public.index?operation=UiV2ExternalSubjectSelfRegister.externalSubjectSelfRegister&externalSubjectInvited=<groupid>>

Invites with group provisioning

Invites in the new UI require at least one group to be invited to. The group management page has a menu item under More Actions for the inviting person (with ADMIN or UPDATE privilege) that launches the invitation form, with the current group pre-filled as the provisioned group. In the form, additional groups can be added to the provisioning list. When an invite email is clicked on, all pending invites for that email address are processed.

The screenshot shows the Grouper UI for the '10100-ITS' group. The breadcrumb trail is 'Home > Root > Basis Groups > Departments > 10100-ITS'. The group name '10100-ITS' is prominently displayed. Below the group name, there are tabs for 'Members', 'Privileges', and 'More'. The 'Members' tab is active, showing a table of group members. The table has columns for 'Entity name' and 'Membership'. The members listed are Océane H Briand, Shannon M Green, Diana U Simpson, and Matthew D Villegas, all with 'Direct' membership. A 'Filter for:' dropdown is set to 'All members', and a search box for 'Member name' is present. A 'Remove selected members' button is at the top of the table. A 'Show:' dropdown is set to '50'. On the right side, there is an orange '+ Add members' button and a 'More actions' dropdown menu. The 'More actions' menu is open, showing various options. The 'Invite external users' option is highlighted in yellow. Other options include 'Add to my favorites', 'Join group', 'Copy group', 'Delete group', 'Edit group', 'Edit composite', 'Move group', 'Export members', 'Import members', 'Remove all members', 'Attestation', 'Deprovisioning', 'View audit log', 'View membership audit log', 'View action audit log', 'View privilege audit log', 'Permissions', and 'Attribute assignments'.

Entity name	Membership
Océane H Briand	Direct
Shannon M Green	Direct
Diana U Simpson	Direct
Matthew D Villegas	Direct

To enable the link to show up in the new UI, set property in `grouper-ui.properties`. In Grouper 2.4.0, there is a property specific to the new UI. In Grouper 2.3.0 (including patches) or less, the `lite UI` property controls visibility in both the `lite UI` and the new UI.

```
# >=2.4.0
inviteExternalPeople.link-from-new-ui = true

# <2.4.0
inviteExternalPeople.link-from-lite-ui = true
```

Invite external users

Email addresses of
people to invite:

Enter the email addresses of people to invite separated by space, newline, comma, or semicolon.

Email subject:

Register to access applications

Enter an optional subject for the email to the users.

Message to users:

Hello,

This is an invitation to register at our site to be able to access our applications. This invitation expires in 7 days. Click on the link below and sign in with your InCommon credentials. If you do not have InCommon credentials you can register at a site like protectnetwork.com and use those credentials.

\$inviteLink\$

Regards.

Enter an optional message to users in the email that will be sent to them. There will be other instructions and a link in the email as well.

Email addresses to notify
when registered:

These email addresses will be notified when the registration is complete. You can enter multiple email addresses in this field separated by space, comma, or semicolon.

Group to assign to new
users:

Basis Groups:Departments:10100-ITS

Once the external users have registered, they will be assigned to this group. Enter a group name or [browse or search for a group where you are allowed to manage memberships](#).

Add another group

Self registration form

The fields below can be customized per institution, as well as the text, look and feel, etc. Some applications might require a lot of user data, and others do not need as much data about the user. It would be nice to have a lot of data, e.g. so the application can use the data (e.g. email address), and so we can have descriptive person pickers, though it is a little risky since the data is user entered and unvetted.

Self registration for people external to this institution
