

DevOps Deployment Guide

Lead

Dean Lane, Rice University

Charter

Develop an architecture-level guide for building DevOps infrastructure. Format in the same style as the Grouper Deployment Guide. [Initial discussion here](#). Community discussion [on Slack Channel here](#)

Deliverable

[TIER DevOps Deployment Guide](#) (Draft developed by a the Campus Success Program Working Group)

Overview Excerpt

DevOps—short for development and operations—is a type of agile relationship between software development and IT operations. It combines the two business functions into a highly collaborative and efficient process. TIER has chosen to support a DevOps environment for the software components included within their standard IAM suite of software which includes COnfigure, Grouper, MidPoint, and Shibboleth.
