

CManage Directory Technical Manual

Welcome to CManage Directory

CManage Directory is a web front end for an LDAP Directory.

CManage Directory

- [Installation](#)
- [Directory Data Model](#)

CManage is the set of products that provide the Identity Management facilities for the CManage platform. Deployers of a CManage instance can select and customize only those products that make sense for their environment. This technical manual is targeted towards the administrators of a CManage instance as well as application developers.
