Grouper v2.4 Release Announcement

August 31, 2018

Hello.

Internet2 is pleased to announce the release of Grouper 2.4, which includes many important enhancements. Grouper is an enterprise access management system designed for the highly distributed management and diverse information technology environment common to universities. Grouper is one of the key components in the TIER Program.

Grouper 2.4 is largely a collection of Grouper 2.3 patches, repackaged, updated, and polished. In addition there are new features too. Upgrading from 2.3 to 2.4 is a minor upgrade and should be planned for soon. The Grouper team will now focus on 2.4 patches and 2.5 development. The timeline for 2.5 will be shorter than the 2.4 timeline, planned for in Spring 2019. We have a lot of exciting plans for 2.4 patches and 2.5 features; we will be reaching out the community shortly to verify our prioritization.

New Features in Grouper 2.4 since the 2.3 initial release include:

Migrate to new UI	Migrate all screens in Admin and Lite UI to the "New UI" and remove the admin and lite UI. Note, you can add the legacy UI if needed
Deprovisioning	Deprovision access from someone to loses an affiliation or changes jobs
Attestation	Groups and folders can be marked to require periodic membership review. Reminders will be emailed to group owners
Grouper deployment guide	
New messaging strategies	Add new messaging strategies for ActiveMQ, AMQP (e.g. RabbitMQ), AWS
Grouper loader in UI	User interface to show loader configuration, diagnostics, logs, wizard editor
Subject API diagnostics	User interface to analyze, diagnose, and recommend improvements for subject source configuration
Real time SQL loader	Allow a change log table (SQL triggers) or messages to trigger loader updates for a partial population or single user
Instrumentation	Improve and standardize Grouper logging to provide centralized metrics at an institution and the ability to upload stats to a central Internet2 server
Packaging	Docker containers that hold Grouper components for each deployment
GSH next generation	Improve gsh by adding readline like capabilities (line editing, tab completions, history, etc)
Inbound messages	Allow Grouper to read a message queue and act on messages (e.g. membership changes etc)
vt-Idap to Ldaptive	Upgrade from vt-Idap to Ldaptive
properties config	Convert sources.xml and ehcache.xml to be cascaded properties files
Update 3rd party libraries	Update 3rd party libraries to the latest version that is feasible

To learn more about the Grouper 2.4 release, to download the software and release notes, for upgrade instructions, and a link to a Grouper demo server, please visit: https://spaces.internet2.edu/display/Grouper/Grouper+Downloads

For an introduction to Grouper, please see the Grouper Deployment Guide.

Grouper features a comprehensive suite of free online training videos and an active and supportive user community.

You are invited to visit the Grouper website, wiki, and join the email lists.

Thanks,

Chris Hyzer on behalf of the Grouper Team
