Grouper Project

THIS IS AN OLDER PAGE. PLEASE See Grouper Developers' Wiki

Use this space for all Grouper-related activities that go beyond mailing list discussions.

Background	The Grouper Working Group is a result of the MACE-Dir-Groups' initial efforts. Grouper originally focused on robust management of groups, emphasizing 1) delegation and distributed management and 2) Integration with most any existing IdM infrastructure. Grouper now provides a broader set of access management capabilities, including roles & permissions. ***New!*** Download the latest version of Grouper
Conference Calls & Minutes	Links to supplemental documents supporting Working Group Conference Calls.
Development Items	View suggested discussion items for the Working Group and other pre-documented items: • Grouper+Product+Roadmap - Keep in touch with Grouper's priority list. • Grouper Web Services - requirements & issues around support for Grouper web services • Grouper UI Analysis - An evaluation of the baseline user interface with proposed modifications (both layout and terms) • Grouper UI Modifications for 1.3 - Terminology, tooltips and infodots that will be included in the spring 08 release
Documents & Presentations	... Attach your WG-related presentations, documents, etc.
Contributions	... Do you have something to share? Code, documentation, or use cases?
Resources	... Looking for that self-assessment tool?
Mailing Lists	The Grouper Working Group mailing lists are intended for Grouper-related questions, discussion items, news events, release updates, etc., and for sharing your campus' questions, concerns, and expertise with the Grouper community.

For additional feature listings, tarballs, and documentation for previous releases, please see Archives.
