

# RBAC Provisioning Connector

**GROUPER:** [About](#) [FAQ](#) [Software](#) [Documentation](#) [Contribute](#) [WG](#) [Contact](#)

## Role Base Access Control Provisioning Connector

The existing LDAP Provisioning Connector has LDAP knowledge built in at almost every level. This is not surprising considering that it was written to satisfy an RFQ that only had LDAP in mind as a target. KU's Relational Database Provisioning Connector is better, but has too much knowledge built in at a low level in the synchronization code about what relational databases might look like.

Here is a diagram of the [current Ldappc classes](#) (with some classes ignored for clarity).
