Grouper LITE UIs (Legacy)

Grouper LITE UIs

NOTE: In version Grouper 2.4+ all functions have been ported to the new UI, and the LITE UI has been removed from the default distribution. For institutions that still require the legacy LITE UI, it can be added back from a custom patch.

History: With the release of Grouper 2.2, most of these LITE UI's (except screens for managing the Attribute Framework, Creating and managing Local Entities, and External Subject Management) were replaced by the new Grouper UI.

To learn about LITE UI:

- Main menu UI
- Membership Update UI
- Attribute framework UI
- Permissions UI
- Group and role editor
- External subject management
- Subject picker
- Attribute picker (e.g. Grouper Resource or Permission Picker)
