

# AWS Control Tower in Beta

The NET+ AWS community team is happy to announce integration of Control Tower functionality with NET+ AWS, and feature parity with direct-deployed Control Tower implementations. NOTE: Control Tower requires the set up a completely new Organization, and does not currently support merging multiple Organizations so if you have existing AWS accounts we are recommending either deploying Landing Zones, or waiting until the AWS feature launch of existing account migrations (expected for the second half of 2019). Please reach out to [netplus@internet2.edu](mailto:netplus@internet2.edu) if you would like to join the Control Tower Beta.
