If you are looking at setting up an instance of Grouper we recommend starting with the Grouper Deployment Guide. The rest of the information below is supplemental information that may help along the way.

The Grouper Book was started in 2011 by a community member, but not completed. It aimed to provide documentation on Grouper which could take people from beginner to expert. It was to supplement and summarize existing documentation which is actively updated. Contributions and comments from the Grouper community are welcome.

Sections on the Wiki will be marked in one of 4 stages:

- · Blank no real content yet
- Draft initial drafts
- · Reviewed has been reviewed for accuracy (technical and linguistic)
- · Completed finished (at least for the current version)

Table of Contents
