

configure-other-software

Here is a list of other federated single sign-on software that is known to work with the MDQ protocol:

- SimpleSAMLPHP
 - See documentation: <https://github.com/simplesamlphp/simplesamlphp/blob/master/config-templates/config.php#L986>
- SATOSA
 - SATOSA is built on pysaml2 which provides a configuration example here for using MDQ: <https://github.com/IdentityPython/pysaml2/blob/master/docs/howto/config.rst#metadata>

For all other identity providers, service providers or discovery services, please contact your vendor. If you want to ask a vendor to implement the MDQ protocol, you can refer them to [this documentation](#). Remember that [aggregates are still available](#) through the per-entity metadata distribution service if your vendor does not support MDQ.
