Grouper SQL provisioner

See also Grouper Provisioning Framework

See also Grouper SQL database provisioning

The info on this page applies to Grouper v4 and above.

Groups, users, and memberships can be provisioned to SQL tables. This is in v2.6.5+

- Grouper provisioning SQL memberships example, group name and subject ID
- Grouper SQL provisioner for Sailpoint provisioning
- Grouper SQL provisioner startWith scaffolding
- Grouper SQL provisioner with groups, entities, memberships

Configure a provisioner for SQL where each column of the group / entity / membership tables are attributes of the group / entity / membership.

Groups and entities can have another table for multi-valued attributes.
