

Special Characteristics of the CManage CO

The CManage CO is created automatically for all new deployments, as the "meta" CO used to manage the platform itself. While the CManage CO operates the same way as any other CO, it does have various special characteristics:

1. Anyone in the `CO:admins` group within the CManage CO is considered a [Platform Administrator](#).
2. Similarly, [API Users](#) created within the CManage CO are given full access to the platform.
3. [CO Themes](#) created in the CManage CO will apply globally, unless overridden by another CO's Theme.
4. As of Registry v4.0.0, [Localizations](#) made in the CManage CO apply to the entire platform.
