Special Characteristics of the COmanage CO

The COmanage CO is created automatically for all new deployments, as the "meta" CO used to manage the platform itself. While the COmanage CO operates the same way as any other CO, it does have various special characteristics:

1. Anyone in the `CO:admins` group within the COmanage CO is considered a Platform Administrator.
2. Similarly, API Users created within the COmanage CO are given full access to the platform.
3. CO Themes created in the COmanage CO will apply globally, unless overridden by another CO's Theme.
4. As of Registry v4.0.0, Localizations made in the COmanage CO apply to the entire platform.
