

Grouper daemon "other job" GSH script to delete orphaned includeExclude groups

Wiki Home	Grouper Release Announcements	Grouper Guides	Grouper Deployment Guide	Community Contributions	Internal Developer Resources
-----------	-------------------------------	----------------	--------------------------	-------------------------	------------------------------

The request is to have a job that deleted include/excludes when the main group is deleted from the loader. These examples are Oracle but can be easily translated to another database

Lets get some test data and make some include/exclude

grouper.properties

```
grouperIncludeExclude.use = true
```

Bounce UI

Create some groups and add include exclude

The screenshot shows the Grouper UI for a group named "group2". The top navigation bar shows the path: Home > Root > test > group2. The main content area displays the group's name, a brief description ("Group containing list of group2 after adding the includes and subtracting the excludes"), and a "More" dropdown menu. Below this are tabs for "Members", "Privileges", and "More". The "Attribute assignments" section contains a table with one row:

Assignment type	Attribute name	Enabled?	Assignment values	Attribute definition	Choose action
Direct assignment	legacyGroupType_addIncludeExclude	enabled		legacyGroupTypeDef_addIncludeExclude	Actions ▾

A large orange button labeled "+ Assign attribute" is located at the bottom right of the attribute assignments section.

Delete some of the groups

Home > Root > test

test

Create a view of main group names and system of record group names

```
create view delete_incl_excl_main_groups_v as
select id as group_id, name as group_name, name || '_systemOfRecord' as systemOfRecord_group_name
from grouper_groups gg where gg.name like 'test:%'
and name like 'test:%' and exists (select count(1) from grouper_attr_asn_group_v gaagv
where attribute_def_name_name = 'etc:legacy:attribute:legacyGroupType_addIncludeExclude' and gg.id = gaagv.
group_id)
and (name not like '%_includes' and name not like '%_excludes' and name not like '%_systemOfRecord' and name
not like '%_systemOfRecordAndIncludes');
```

```
select * from delete_incl_excl_main_groups_v;
```

GROUP_ID	GROUP_NAME	SYSTEMOFRECORD_GROUP_NAME
fc76036197fa45008bc5234f5f1822a2	test:group2	test:group2_systemOfRecord
f36e154b7799449987d5294857a0ed29	test:group4	test:group4_systemOfRecord

Create a view of non main groups

```
create view delete_incl_excl_nonmain_gr_v as
select id as meta_group_id, name as meta_group_name,
case
when name like '%_includes' then substr(name, 1, length(name) - length('_includes'))
when name like '%_excludes' then substr(name, 1, length(name) - length('_excludes'))
when name like '%_systemOfRecord' then substr(name, 1, length(name) - length('_systemOfRecord'))
when name like '%_systemOfRecordAndIncludes' then substr(name, 1, length(name) - length
('_systemOfRecordAndIncludes'))
end as source_group_name
from grouper_groups
where name like 'test:%' and (name like '%_includes' or name like '%_excludes' or name like '%_systemOfRecord'
or name like '%_systemOfRecordAndIncludes');
```

```
select * from delete_incl_excl_nonmain_gr_v;
```

Query of main group ids to delete

```
select group_id from delete_incl_excl_main_groups_v where not exists (select 1 from grouper_groups gg where gg.name = systemOfRecord_group_name)
```

Query of non-main group ids to delete

```
select meta_group_id from delete_incl_excl_nonmain_gr_v where not exists (select 1 from grouper_groups gg where gg.name = source_group_name)
```

GSH to delete main groups (to delete), then non-main groups (to delete)

```

grouperSession = GrouperSession.startRootSession();
import edu.internet2.middleware.grouperClient.jdbc.GcDbAccess;
groups = new ArrayList();
groupIds = new GcDbAccess().sql("select group_id from delete_incl_excl_main_groups_v where not exists (select 1
from grouper_groups gg where gg.name = systemOfRecord_group_name)").selectList(String.class);
for (i=0;i<groupIds.size();i++) {groups.add(GroupFinder.findByUuid(grouperSession, groupIds.get(i), true));}
for (i=0;i<groups.size();i++) { groups.get(i).delete(); OtherJobScript.retrieveFromThreadLocal().
getOtherJobInput().getHib3GrouperLoaderLog().addDeleteCount(1); }
groups.clear();
groupIds = new GcDbAccess().sql("select meta_group_id from delete_incl_excl_nonmain_gr_v where not exists
(select 1 from grouper_groups gg where gg.name = source_group_name)").selectList(String.class);
for (i=0;i<groupIds.size();i++) {groups.add(GroupFinder.findByUuid(grouperSession, groupIds.get(i), true));}
for (i=0;i<groups.size();i++) { groups.get(i).delete(); OtherJobScript.retrieveFromThreadLocal().
getOtherJobInput().getHib3GrouperLoaderLog().addDeleteCount(1); }

```

Put that in one GSH script if not in a gsh file in the container... 😊

grouper-loader.properties (note, the script source is all one line, each linebreak signified with \$newline\$). Again, if you want this in a script file mounted in your container or inn your subimage thats fine too and easier to read)

```

otherJob.deleteIncludeExcludeGsh.class = edu.internet2.middleware.grouper.app.loader.OtherJobScript
otherJob.deleteIncludeExcludeGsh.quartzCron = 0 13 * * * ?
otherJob.deleteIncludeExcludeGsh.scriptType = gsh
otherJob.deleteIncludeExcludeGsh.scriptSource = grouperSession = GrouperSession.startRootSession();
$newline$import edu.internet2.middleware.grouperClient.jdbc.GcDbAccess;$newline$groups = new ArrayList();
$newline$groupIds = new GcDbAccess().sql("select group_id from delete_incl_excl_main_groups_v where not exists
(select 1 from grouper_groups gg where gg.name = systemOfRecord_group_name)").selectList(String.
class);$newline$for (i=0;i<groupIds.size();i++) {groups.add(GroupFinder.findByUuid(grouperSession, groupIds.get
(i), true));}$newline$for (i=0;i<groups.size();i++) { groups.get(i).delete(); OtherJobScript.
retrieveFromThreadLocal().getOtherJobInput().getHib3GrouperLoaderLog().addDeleteCount(1); } $newline$groups.
clear();$newline$groupIds = new GcDbAccess().sql("select meta_group_id from delete_incl_excl_nonmain_gr_v where
not exists (select 1 from grouper_groups gg where gg.name = source_group_name)").selectList(String.
class);$newline$for (i=0;i<groupIds.size();i++) {groups.add(GroupFinder.findByUuid(grouperSession, groupIds.get
(i), true));}$newline$for (i=0;i<groups.size();i++) { groups.get(i).delete(); OtherJobScript.
retrieveFromThreadLocal().getOtherJobInput().getHib3GrouperLoaderLog().addDeleteCount(1); }

```

If you save that as grouper-loader.properties and import into the configuration editor it will get loaded into the database

Logged in a
