

NationalityEnroller Plugin

The NationalityEnroller allows a Petitioner to self assert their national affiliation(s), which are then stored as [Identity Documents](#), with a Document Type of *Self Assertion*. This plugin supports [Attribute Enumerations](#) for the attribute *Identity Document (Issuing Authority, Self Assertion)*.

The plugin is configured as follows:

- **Maximum Nationalities:** The maximum number of nationalities that the Petitioner may list. Each will be saved as a separate Identity Document with Subtype *nationality*.
- **Collect Permanent Residency:** If set, allow the Petitioner to optionally assert a Permanent Residency. If collected, it will be saved as an Identity Document with Subtype *residency*.
- **Permanent Residency Authority:** Instead of offering a select list for Permanent Residency, offer a checkbox option for the configured authority. The available values for this option are taken from the [Attribute Enumeration](#) for the attribute *Identity Document (Issuing Authority, Self Assertion)*, if it is configured.
