

Grouper custom template via GSH Internet2 example

Wiki Home	Grouper Release Announcements	Grouper Guides	Grouper Deployment Guide	Community Contributions	Internal Developer Resources
---------------------------	---	--------------------------------	--	---	--

- [Grouper custom template via GSH Internet2 example delete](#)

COmanage will call a grouper web service to execute a template to create a working group. This is not an exact example but all the necessary features are here so ChrisHu can use these techniques for jira/confluence/etc

template config id: createNewWorkingGroup

group allowed to run this template: ref:workinggroupadmins

Inputs:

Name	Type	Validation	Default	Required	Description
gsh_input_workingGroupExtension	String	alphanumeric and dash		required	will be used in the folder and group system names
gsh_input_workingGroupDisplayExtension	String	no colon		optional	can be used as display extension, or default to extension
gsh_input_workingGroupDescription	String	none		optional	can be used as description for folders/groups
gsh_input_isSympa	boolean	NA	false	optional	if its a sympas enabled working group
gsh_input_sympaDomain	String	internet2 incommon		required if gsh_input_isSympa	(dropdown) which domain the list is in
gsh_input_isSympaModerated	boolean	NA	false	optional	if sympas list is moderated add attribute to sympas working group folder
gsh_input_isOptin	boolean		false	optional	if the users list can be optin from all
gsh_input_attestationDays	int	between 30 and 365	365	optional	days for attestation
gsh_input_isConfluence	boolean		false		if confluence groups should be built out
gsh_input_isJira	boolean		false		if Jira groups should be built out

GSH actions (in a transaction):

Step	Run if condition	Description	Message
Check if working group folder exists	always	Return an error and fail execution with descriptive message	Error: working group extension 'abc' already exists!
Check gsh_input_sympaDomain	if gsh_input_isSympa	Return an error and fail execution with descriptive message	Error: Sympa domain is required if provisioning to sympas
Create working group folder	always	Create working group folder: ref:incommon-collab: <gsh_input_workingGroupExtension> User friendly name and description if applicable for this folder and subsequent objects	Folder created: ref:incommon-collab: <gsh_input_workingGroupExtension>
Create users group	always	Create users group: ref:incommon-collab: <gsh_input_workingGroupExtension>:users	Group created: ref:incommon-collab: <gsh_input_workingGroupExtension>:users
Create admins group	always	Create admins group: ref:incommon-collab: <gsh_input_workingGroupExtension>:admins	Group created: ref:incommon-collab: <gsh_input_workingGroupExtension>:admins
Resolve admin subject	if not blank gsh_input_initialAdminSubjectId	If not resolvable, give warning	Warning: admin subject not resolvable '<subject_id>'
Add admin to group	if certain source? gsh_builtin_subject	Add admin subject to admins group	Print message about user being added
Assign privs for admins on folder	always	Assign inherited group admin privs on working group folder for admin group	Assigned group admin privileges to ref:incommon-collab: <gsh_input_workingGroupExtension>:admins inherited from folder: ref:incommon-collab: <gsh_input_workingGroupExtension>

Assign attestation at working group folder level for admins	always	Add attestation at working group folder for admins to attest	Added attestation for 90 days on groups in folder: ref:incommon-collab: <gsh_input_workingGroupExtension>
Create sympas folder	if gsh_input_isSympa	Create folder app:sympa:<domain>: <gsh_input_workingGroupExtension>	Folder created: app:sympa:<domain>: <gsh_input_workingGroupExtension>
Create owners sympas group	if gsh_input_isSympa	Create owners group: create group app:sympa:<domain>: <gsh_input_workingGroupExtension>:owners	Group created: app:sympa:<domain>: <gsh_input_workingGroupExtension>:owners
Create subscribers sympas group	if gsh_input_isSympa	Create subscribers group: create group app:sympa:<domain>: <gsh_input_workingGroupExtension>:subscribers	Group created: app:sympa:<domain>: <gsh_input_workingGroupExtension>:subscribers
Add admin group to owners group	if gsh_input_isSympa	Add ref:incommon-collab: <gsh_input_workingGroupExtension>:admins to be member of app:sympa:<domain>: <gsh_input_workingGroupExtension>:owners	Added member ref:incommon-collab: <gsh_input_workingGroupExtension>:admins to group app:sympa:<domain>: <gsh_input_workingGroupExtension>:owners
Add users group to subscribers group	if gsh_input_isSympa	Add ref:incommon-collab: <gsh_input_workingGroupExtension>:users to be member of app:sympa:<domain>: <gsh_input_workingGroupExtension>:subscribers	Added member ref:incommon-collab: <gsh_input_workingGroupExtension>:users to group app:sympa:<domain>: <gsh_input_workingGroupExtension>:subscribers
Assign privs for admins on sympas folder	if gsh_input_isSympa	Assign inherited group admin privs on sympas folder for admin group	Assigned group admin privileges to ref:incommon-collab: <gsh_input_workingGroupExtension>:admins inherited from folder: app:sympa:<domain>: <gsh_input_workingGroupExtension>
Add moderated marker attribute to sympas folder	if gsh_input_isSympa and gsh_input_isSympaModerated	Assign a sympas attribute to the sympas folder for midpoint	Assigned attribute app:sympa:attribute:moderated to folder app:sympa:<domain>: <gsh_input_workingGroupExtension>
Assign attestation at sympas folder level for admins	if gsh_input_isSympa	Add attestation at sympas folder for admins to attest	Added attestation for 90 days on groups in folder: app:sympa:<domain>: <gsh_input_workingGroupExtension>

Common settings

Setting	Value	Description
actAs (WS)	some user	audits will be correct if
runAs	GrouperSystem	template runs as privileged user
canRun	a:b:c	make a group and put the COnfigure credential in there and all users who will be running template
transactional	true	if something fails, roll the whole thing back
individual audits	true	each individual action should be audited
runFromFolder	ref:incommon-collab	you will see this option in the menu when on that folder

GSH script	<input type="checkbox"/> EL?	<pre>String workingGroupFolderName = "sandbox:ref.incommon-collab:" + gsh_input_workingGroupExtension; // default value for display extension is just the extension</pre> <div style="text-align: right;">▴ ▾ ⋮ *</div>
		This is the GSH template to run
Number of inputs	<input type="checkbox"/> EL?	<input type="text" value="7"/> ▾

Number of inputs (form elements on ui or in ws). Default value is '0'.

Input item - 1

Input item

Input name - 1 EL? *

Name of the ui form element, ws param, template variable

Label - 1 EL?

Label on the UI for this input

Description - 1 EL?

Description on the UI for this input

Input type - 1 EL?

Type of the data. Default value is 'string'.

Form element type - 1 EL?

Form element type on UI. Default value is 'textfield'.

Form element index - 1 EL?

Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 1 EL? *

Type of validation on the input

Builtin validation - 1 EL? *

Type of builtin validation on the input

input.0.validationMessage EL?

validation message text

Required - 1 EL? Default value (False) True False

If this input is required for template to run. Default value is 'false'.

Jexl for showEI - 1 EL?

Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 1 EL? Default value (True) True False

If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 2 EL? *

Name of the ui form element, ws param, template variable

Label - 2 EL?

Label on the UI for this input

Description - 2 EL?

Description on the UI for this input

Input type - 2 EL? ▼

Type of the data. Default value is 'string'.

Form element type - 2 EL? ▼

Form element type on UI. Default value is 'textfield'.

Form element index - 2 EL?

Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 2 EL? ▼ *

Type of validation on the input

Validation regex - 2 EL? *

Regex to check the input and if it doesnt match then fail. For example, this is alphanumeric or underscore length between 1 and 50

input.1.validationMessage EL?

validation message text

Required - 2 EL? Default value (False) True False

If this input is required for template to run. Default value is 'false'.

Default value - 2 EL?

default value for the input if none is provided

Jexl for showEI - 2 EL?

Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 2 EL? Default value (True) True False

If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 3 EL? *

Name of the ui form element, ws param, template variable

Label - 3 EL?

Label on the UI for this input

Description - 3 EL?

Description on the UI for this input

Input type - 3 EL? ▼

Type of the data. Default value is 'string'.

Form element type - 3 EL? ▼

Form element type on UI. Default value is 'textfield'.

Form element index - 3

EL?

Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 3

EL?

 *

Type of validation on the input

input.2.validationMessage

EL?

validation message text

Required - 3

EL?

Default value (False) True False

If this input is required for template to run. Default value is 'false'.

Default value - 3

EL?

default value for the input if none is provided

Jexl for showEI - 3

EL?

Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 3

EL?

Default value (True) True False

If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 4

EL?

 *

Name of the ui form element, ws param, template variable

Label - 4

EL?

Label on the UI for this input

Description - 4

EL?

Description on the UI for this input

Input type - 4

EL?

Type of the data. Default value is 'string'.

Form element type - 4

EL?

Form element type on UI. Default value is 'textfield'.

Form element index - 4

EL?

Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Form element index - 4 EL?
Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 4 EL? *
Type of validation on the input

input.3.validationMessage EL?
validation message text

Required - 4 EL? Default value (False) True False
If this input is required for template to run. Default value is 'false'.

Default value - 4 EL?
default value for the input if none is provided

Jexl for showEI - 4 EL?
Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 4 EL? Default value (True) True False
If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 5 EL? *
Name of the ui form element, ws param, template variable

Label - 5 EL?
Label on the UI for this input

Description - 5 EL?
Description on the UI for this input

Input type - 5 EL?
Type of the data. Default value is 'string'.

Form element type - 5 EL?
Form element type on UI. Default value is 'textfield'.

Form element index - 5 EL?
Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 5 EL? *
Type of validation on the input

Validation regex - 5 EL? *
Regex to check the input and if it doesnt match then fail. For example, this is alphanumeric or underscore length between 1 and 50

input.4.validationMessage EL?
validation message text

Required - 5 EL? Default value (False) True False
If this input is required for template to run. Default value is 'false'.

Jexl for showEI - 5 EL?
Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 5 EL? Default value (True) True False

If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 6 EL? *

Name of the ui form element, ws param, template variable

Label - 6 EL?

Label on the UI for this input

Description - 6 EL?

Description on the UI for this input

Input type - 6 EL? ▾

Type of the data. Default value is 'string'.

Form element type - 6 EL?

Form element type on UI. Default value is 'textfield'.

Form element index - 6 EL?

Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.

Validation type - 6 EL? ▾ *

Type of validation on the input

input.5.validationMessage EL?

validation message text

Required - 6 EL? Default value (False) True False

If this input is required for template to run. Default value is 'false'.

Default value - 6 EL?

default value for the input if none is provided

Jexl for showEI - 6 EL?

Jexl for if this field should show, note all inputs are available to use as variables

Trim whitespace - 6 EL? Default value (True) True False

If whitespace should be trimmed from the value for this input. Default value is 'true'.

Input item - 1

Input item

Input name - 7	<input type="checkbox"/> EL?	<input type="text" value="gsh_input_initialAdminSubjectId"/> *
Name of the ui form element, ws param, template variable		
Label - 7	<input type="checkbox"/> EL?	<input type="text" value="Initial admin subject ID"/>
Label on the UI for this input		
Description - 7	<input type="checkbox"/> EL?	<input type="text" value="Enter the initial admin subject ID to add to admins group"/>
Description on the UI for this input		
Input type - 7	<input type="checkbox"/> EL?	<input type="text" value="string"/>
Type of the data. Default value is 'string'.		
Form element type - 7	<input type="checkbox"/> EL?	<input type="text" value="textfield"/>
Form element type on UI. Default value is 'textfield'.		
Form element index - 7	<input type="checkbox"/> EL?	<input type="text" value="0"/>
Form elements will show on the form in order of "index". DefaultValue is 0. If two elements have the same index then they will show in order of configuration. Default value is '0'.		
Validation type - 7	<input type="checkbox"/> EL?	<input type="text" value="regex"/> *
Type of validation on the input		
Validation regex - 7	<input type="checkbox"/> EL?	<input type="text" value="^[^s]+\$"/> *
Regex to check the input and if it doesnt match then fail. For example, this is alphanumeric or underscore length between 1 and 50		
input.6.validationMessage	<input type="checkbox"/> EL?	<input type="text" value="Do not use whitespace in admin subject ID"/>
validation message text		
Required - 7	<input type="checkbox"/> EL?	<input checked="" type="radio"/> Default value (False) <input type="radio"/> True <input type="radio"/> False
If this input is required for template to run. Default value is 'false'.		
Default value - 7	<input type="checkbox"/> EL?	<input type="text" value=""/>
default value for the input if none is provided		
Jexl for showEI - 7	<input type="checkbox"/> EL?	<input type="text" value=""/>
Jexl for if this field should show, note all inputs are available to use as variables		
Trim whitespace - 7	<input type="checkbox"/> EL?	<input checked="" type="radio"/> Default value (True) <input type="radio"/> True <input type="radio"/> False
If whitespace should be trimmed from the value for this input. Default value is 'true'.		
Test settings		
Test settings		
Number of tests	<input type="checkbox"/> EL?	<input type="text" value="1"/>
Number of tests to make sure this template functions. Default value is '0'.
