HTTP call. Use this for all HTTP calls as a client

```
import edu.internet2.middleware.grouper.util.*;
GrouperHttpClient grouperHttpClient = new GrouperHttpClient();
grouperHttpClient.assignUrl(url);
grouperHttpClient.assignGrouperHttpMethod("POST");
grouperHttpClient.addHeader("Content-Type", "application/json");
grouperHttpClient.addHeader("Authorization", "Bearer " + bearerToken);
grouperHttpClient.assignBody(body);
grouperHttpClient.executeRequest();
if (grouperHttpClient.getResponseCode() != 200) {
    throw new RuntimeException("Error connecting to '" + url + "': " + grouperHttpClient.getResponseCode());
}
String json = grouperHttpClient.getResponseBody();
```
