

# GrouperShell (gsh) Stem copy (StemCopy)

<a href="#">Wiki Home</a>	<a href="#">Grouper Release Announcements</a>	<a href="#">Grouper Guides</a>	<a href="#">Grouper Deployment Guide</a>	<a href="#">Community Contributions</a>	<a href="#">Internal Developer Resources</a>
---------------------------	---	--------------------------------	--	---	--

Use this class to copy a stem to another stem.

Sample call to copy everything from source to target

```
StemCopy stemCopy = new StemCopy(stem_copy_source, stem_copy_target);
Stem newStem = stemCopy.copyPrivilegesOfStem(true).copyPrivilegesOfGroup(true)
    .copyGroupAsPrivilege(true).copyListMembersOfGroup(true)
    .copyListGroupAsMember(true).copyAttributes(true).save();
```
