Overview

`eduPersonScopedAffiliation` defines a set of controlled vocabulary specifying a person's relationship(s) to the institution in broad categories such as student, faculty, staff, alum, etc. `eduPersonScopedAffiliation` is defined in the eduPerson LDAP object class.

This identifier is scoped and of the form `affiliation@scope`:

- The left component (`affiliation`) is one of the values from the `eduPersonAffiliation` controlled vocabulary. Within the same assertion, the values asserted in eduPersonAffiliation should match those asserted in eduPersonScopedAffiliation.
- The `scope` portion MUST be the administrative domain of the identity system where the identifier was created and assigned. The `scope` portion MAY contain any Unicode character. The length of the scope portion MUST be less than or equal to 256 characters. Note that the use of characters outside the seven-bit ASCII set or extremely long values in the scope portion may cause issues with interoperability.
