

# saml-mdui-uiinfo

The [SAML V2.0 Metadata Extensions for Login and Discovery](#) specification defines an `<mdui:UIInfo>` extension element in SAML metadata. InCommon supports the following child elements of the `<mdui:UIInfo>` element:

- `<mdui:DisplayName>`
- `<mdui:Description>`
- `<mdui:InformationURL>`
- `<mdui:PrivacyStatementURL>`
- `<mdui:Logo>`

An example follows:

```
<!-- User Interface Elements for InCommon IdPs and SPs -->
<md:Extensions>
  <mdui:UIInfo xmlns:mdui="urn:oasis:names:tc:SAML:metadata:ui">
    <mdui:DisplayName xml:lang="en">...</mdui:DisplayName>
    <mdui:Description xml:lang="en">...</mdui:Description>
    <mdui:InformationURL xml:lang="en">...</mdui:InformationURL>
    <mdui:PrivacyStatementURL xml:lang="en">...</mdui:PrivacyStatementURL>
    <!-- the actual width and height of the image are input by the user -->
    <mdui:Logo width="130" height="80">...</mdui:Logo>
  </mdui:UIInfo>
</md:Extensions>
```

See [User interface elements](#) for information about how the UIInfo element is used in InCommon metadata.
