

saml-shibmd-scope

As defined in the [REFEDS eduPerson schema](#) and the [SAML v2.0 Subject Identifier Profile](#), an IdP's permissible scopes are expressed in the <md:Extensions> element of the IdP's metadata:

```
<md:Extensions xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata">
  <shibmd:Scope regexp="false"
    xmlns:shibmd="urn:mace:shibboleth:metadata:1.0">internet2.edu</shibmd:
Scope>
</md:Extensions>
```

See [Scope](#) for information about how the Scope element is used in InCommon metadata.
