

Grouper UI and version

Wiki Home	Download Grouper	Grouper Guides	Community Contributions	Developer Resources	Deployment Guide
---------------------------	----------------------------------	--------------------------------	---	-------------------------------------	----------------------------------

You can see which version of Grouper is running in the UI in the configure screen

The screenshot shows the Grouper UI's 'Configure' page. At the top, there is a breadcrumb navigation: 'Home > Miscellaneous > Configure'. The main title is 'Configure' in large blue font. Below it, a subtitle reads 'System settings and wizards to setup the registry. Grouper version: 2.6.4'. A button labeled 'Configuration files' is visible.

This output uses a JEXL expression in the text config (grouper.text.en.us.properties)

```
configurationIndexSubtitle = System settings and wizards to setup the registry. Grouper version: ${edu.internet2.middleware.grouper.misc.GrouperVersion.grouperVersion()}
```

The JEXL expression can be used in other text properties. In the following example, the version is added to the institution name:

```
institutionName.elConfig = Institute of Higher Education (Grouper ${edu.internet2.middleware.grouper.misc.GrouperVersion.grouperVersion()})
```

The screenshot shows the Grouper UI's homepage. At the top, there is a 'Home' link in a dark blue header bar. Below it, the word 'Grouper' is displayed in a large blue font. Underneath 'Grouper', the text 'Institute of Higher Education (Grouper 2.6.5)' is shown in a light gray font.
