Registry Addresses

Date Model Elements

The Registry Address data model consists of several fields: Street, Room, Locality, State, Postal Code, Country, and Language.

Required Fields

It is possible to set which Address fields are required via *Configuration > CO Settings*. These settings apply to Address collection in all contexts.

Default Address Type

When adding a new Address via the UI, it is possible to set the default value for the Address type via *Configuration > CO Settings*.

Changes From Earlier Versions

As of Registry v5.0.0

- *Address* can be attached directly to *Person*.
