

Grouper provisioning unit tests

Wiki Home	Grouper Release Announcements	Grouper Guides	Grouper Deployment Guide	Community Contributions	Internal Developer Resources
---------------------------	---	--------------------------------	--	---	--

This should be run before each release.

1. Start up Docker
2. Make sure this is set in grouper.properties

```
# if the sql provisioning tests should be included when running all tests (default false)
# {valueType: "boolean", required: true}
junit.test.sqlProvisioning = true

# make sure docker is there
# {valueType: "boolean", required: true}
junit.test.ldap.dinkel = true

# http port to look for to see if tomcat has started, e.g. 8500
# {valueType: "integer", defaultValue: "8080"}
junit.test.tomcat.port = 8400
```

3. Make sure this is set in grouper.hibernate.properties

```
grouper.is.mockServices = false
grouper.is.ui = true
```

4. Remove local or database configs that might conflict (LDAP external system or subject source)
5. Start a UI
6. Run this test:

```
AllProvisioningTestsManual
```
