A Registry *Person* is intended to represent one physical human within the CO. A Person can have one or more *External Identities*, which can describe any sort of external relation to the CO.

Date Model Elements

The Person object itself has relatively few attributes, most prominently `date_of_birth`. In general, Registry allows multiple values for attributes, so most attributes are stored in related tables, including

Changes From Earlier Versions

As of Registry v5.0.0

- *CoPerson* was renamed to *Person*.
