Date Model Elements

Ad Hoc Attributes are simple key/value pairs attached to [People](#), [Person Roles](#), [External Identities](#), and External Identity Roles. Ad Hoc Attributes are available via the [REST API](#), are supported by External Identity Source Plugins and [Pipelines](#), and are made available to [Provisioner Plugins](#).

Ad Hoc Attributes are not currently validated in any way and do not support Enrollment Flows ([CO-1478](#)).

Because Ad Hoc Attributes are neither namespaced nor typed, they should not be used as a replacement for solutions leveraging properly designed structured data. Ad Hoc Attributes are most suitable for simple, local data extensions where the cost of structured data is not warranted.
