

EDUCAUSE Member QuickTalk | NET+ LastPass Follow-up Blog with Recording

We had a great EDUCAUSE Member QuickTalk | [NET+ LastPass](#) on 3/31/2022! Many thanks to Aaron Baillio, Chief Information Security Officer (CISO), and Jonathan Killgore, IT Specialist, at the University of Oklahoma for sharing how they deployed NET+ LastPass on their campus. There were 57 participants on the call to listen and ask questions. EDUCAUSE QuickTalks, in-person conferences, and NET+ community events are a great way to learn about how your peers are solving problems on their campuses.

During this QuickTalk, we learned how OU deployed NET+ LastPass with MFA enabled to almost 13,000 faculty and staff to help them better manage their passwords. Baillio and Kilgore also described engagement with students at the start of the semester to introduce them to self-service enrollment using LastPass to improve student password hygiene. As part of the initial project planning to deploy LastPass, they involved a broad range of stakeholders to identify the needs of their community. Their deployment was more successful than they expected and didn't result in many calls to their helpdesk. Baillio discussed one area of interest to many campuses, which is distributed administration. He described how they used the managed companies' functionality to enable distributed administration with multiple different roles for Helpdesk, Endpoint Admins, departmental management, and others. One participant on the talk commented about how on their campus the families as a benefit (mentioned in the [last NET+ LastPass program update!](#)) helped them with gaining support for their deployment.

The recording can be accessed on the [EDUCAUSE Member QuickTalk | NET+ LastPass](#) webpage.

I also mentioned a NET+ LastPass program [update blog post](#) that was posted this morning when I gave an overview of the program. If you have any questions about the [NET+ LastPass](#) program, please feel free to reach out to [me](#) with any questions.
