saml-mdrpi-registrationinfo

The `<mdrpi:RegistrationInfo/>` element identifies the registration authority (*i.e.*, the entity's federation) that enrolled this entity as the value of the XML attribute `registrationAuthority`. For InCommon-registered entities, that value is always "https://incommon.org/". For entities registered by other federations, it will contain a value that uniquely identifies that federation (available via https://technical.edugain.org/status).

Example:

```
<mdrpi:RegistrationInfo registrationAuthority="https://incommon.org"/>
```
