Guest stars: Niels van Dijk,

Regrets: Joanne, Steve P

Scribes: Mark Rank, Judith B

Status Updates - Q&A

- Call out for folks to update.
- (see email updates below)

InCommon TAC nominations update

- Kevin – there are several nominations for Steering. Some steering might be candidates that would be of interest of TAC

Digital Wallets in the EU/GÉANT from Niels van Dijk from SURFNet

This was a preview of a session Niels will present at the [2022 Internet2 TechEx](#) to be held starting December 4, 2022 in Devenver, CO.

- Heather intro Digital Wallets
- Have other committee members
- Hand it over to Niels van Dijk slide show
 - Will handle questions along the way but reserve the right to table for end
 - Niels does intro
- Running out of time at slide 9 (13:58), skipped to slide 13.

Email Updates

International Updates

From: Heather Flanagan

REFEDS

- Three consultations are now open: Anonymous Access, Pseudonymous Access, and Personalized Entity Categories, with the Federated Authorization Best Practice and the FAQ available as bonus prizes. The consultations are open until 8 November 2022.
- The latest REFEDS community chat was held on 6 October and covered the MFA Profile. All community chats are recorded and made available online. See <https://refeds.org/community-chats>.
- The next in-person REFEDS meeting is scheduled for 5 December 2022 before TechEx. Please register! <https://internet2.edu/2022-technology-exchange/>

Authenticate

- The FIDO Alliance's annual conference, [Authenticate](#), is being held in Seattle the week of 17 October. For anyone following the passwordless space, this is a conference to watch.

IIW and the OpenID Workshop

- The next IIW meeting is scheduled for 15-17 November 2022 in its usual location of Mountain View, California. As usual, there will likely be a strong contingent of people interested in the SSI/VC/DID space, but as an unconference, the actual content depends on what people bring to the table.
- The OpenID Foundation is planning a workshop the Monday before IIW (14 November 2022). Details are still pending regarding registration and location, but the commitment is there.

Misc

- The OpenID Foundation, partnered with the Kantara Initiative, is also planning on producing a privacy whitepaper; Heather Flanagan holds the pen on that, and work starts immediately. The whitepaper is intended to define the wider privacy landscape and place efforts like Kantara's Privacy Enhancing Mobile Credential working group (PEMC WG) and various OIDF working groups in context, along with major privacy laws and regulations.

Browser Interactions

The FedID CG is updating its charter to include work on navigational based tracking and redirects (note that work on replacing functionality that's lost when third-party cookies are banned or partitioned remains the highest priority). Apple has joined the CG, which brings all the major browser vendors to the table. The [Federated Credential Management API \(FedCM\)](#) is one of our two work items, and focuses more on IdP discovery than actual authentication flows. The other work item is the documentation of various [use cases](#) and how all the different privacy APIs being developed might impact different points of an OIDC-based authentication flow.

Wallets and Federation

TAC will be listening to presentations from Niels van Dijk (SURF) and Kerri Lemoie (MIT) around what's happening in the digital wallet space in higher education. Of related interest, the Linux Foundation is kicking off the [OpenWallet Foundation](#) to help solve for the lack of standard definition around "what's a wallet."

I2 Ops Updates

From: Johnny Lasker

A couple of Ops Updates:

1. FM Release 7.0.1
 - a. Webpacker JavaScript upgrade for Federation Manager
2. Defining epic for Delegated Administrator migration work
3. Development updates to Baseline Expectations v2 health check functions
4. Reviewing/Finalizing eduroam RP testing proposal
