

Registry 4.1.1 Release Announcement

Internet2 and the CManage Project are today announcing the release of CManage Registry version 4.1.1. This release is a maintenance release addressing a bug affecting deployments using MySQL. This version also contains other various bug fixes.

We recommend all deployments upgrade to this release.

The CManage Project always recommends backing up the Registry database before upgrading. The Registry 4.1.1 release includes a hotfix version of the ADOdb database abstraction tool used by Registry. No upgrade issues are expected with the ADOdb hotfix release but we again recommend you backup your Registry database before upgrading. Upgrade notes can be found [here](#).

Full release notes are available at <https://spaces.at.internet2.edu/display/CManage/Release+History>

CManage is funded by Internet2 and other sources. For further information about CManage, including a list of funders, and to download the software, please visit: <http://www.internet2.edu/comanage> and <https://spaces.at.internet2.edu/display/CManage>
