Logistics

Fri 4 Nov 2011
1pm ET/12pm CT/10a PT

via Skype

Agenda

1. Update on December f2f logistics and agenda
2. Review of open issues
 - a. [CO-89](#)
 - b. [CO-193](#)
 - c. [CO-94](#)
3. Cake 2.0: Now, soon, later, or never? ([CO-112](#))
 - a. Use of native features like exceptions, PDO, SPL, json_encode and much more. (Could simplify json handling)
 - b. New Error and Exception handlers provide easier to configure, and ease working with errors such as page not found, unauthorized error and lots more. ([CO-108](#))
 - c. Completely refactored Auth system. It is now easier to configure and plug in your own implementations for external login services or your permissions system. ([CO-124](#), [CO-128](#))
 - d. Dropped SimpleUnit in favor of PHPUnit. PHPUnit is the defacto testing framework for PHP with support for more options, better mock objects, and improved console output ([CO-97](#))
 - e. Improved support for PostgreSQL, SQLite and SqlServer, they are now first class citizens along with Mysql datasource.
 - f. HTML 5 form inputs support in form helper.
 - g. A lot faster, almost everything is now lazy-loaded, and even on debug mode you will feel your applications flying.
 - h. Localized [9](#): A set of country specific classes for validation a displaying correct texts for each country in your application ([CO-117](#))
 - i. Migrations [11](#): Easy database schema migrations and history tracking.
4. Next call: 11/17 11:30a ET/8:30a PT
