Notes

back to the existential question: what does this subteam think it is doing, or supposed to be doing?

- continued discussion about finding the balance between code and interfaces
- code fills gaps, interfaces define the gaps to be filled
- the "suite" wants code, and decisions about this code vs that code
- the "ecosystem" wants interfaces, and architecture

consensus regarding id-match as the first example component to define interfaces and component functionality

is id-match component "inside" the Person Registry?
where "inside" could mean: inseparable from PR, or only called by PR
one UC campus has a model where id-match is called by source systems, so need to support that
OpenRegistry has Java interface, but id-match is "inside" today

how do we do interface specification?

- language-specific is to be avoided
- Kuali has used SOA (XML/SOAP) service contracts

• RESTful is popular these days. yes, everyone likes RESTful, so let's do that

the HR interface

UC overall is driven by common Oracle HR across campuses Rutgers has Oracle HR too, interested in common interface but at Rutgers person data flows via Data Warehouse

F2F

- in Phoenix Jan 5-6 2012
- please indicate interest in attendance (if you haven't been tapped already)

public communication

- some concern about whether we have enough to say, but on reflection maybe we do
 add bullets to wiki page, maybe wind up next week
