

# Integration Strategy 3

## Integration Strategy 3

Integration Strategy 3 allows for the use of University accounts to interact with CommIT collaborative participant(s).

The following flows involve the use of a existing University account and attributes tied with it to interact with existing CommIT collaborative participant services.

### Actors Involved in these scenarios

1. **Student: S1** - In this case it is the user Ursala, University Student at University, U1.
2. **University: U1** - In this case the University attended by S1.
3. **Participating Portal: P1** - It could be a Service Organization (Ex. Collegeboard, ACT, FAFSA etc) or an Application Service Organization (Aggregation portal; school system, other than U school, etc.). A user may have local account with this organization. P1 also offers an attribute service that can be viewed as a business opportunity for P1 to contract with potential customers who are interested in retrieving valuable information about the user.
4. **"CommIT collaborative" Identity Provider: IdP** - "CommIT collaborative" portal that also supports central account creation UI to establish a unique identifier for the user.
5. **University Identity Provider: UIdP** - IdP for U1

### Scenario 1: University credential holder, S1, already has a CommIT Collaborative Credential
