MyPlan

This is just a summary description of MyPlan for the purposes of the ITANA-SOA survey. For official description of the project see:

1. The MyPlan project public website
2. The Kuali website

MyPlan is an on-line tool for students that integrates:

1. A faceted search of the course catalog
2. An on-line advising tool
3. A course selection and planning tool
4. The ability to select required courses from an audit

It integrates various legacy systems (DARS degree audit and a legacy curriculum system) and various Kauli modules (Kuali Student Curriculum Development and Kuali Identity Management). The reasopn why this is such a good example of SOA is that ***all the integrations are done via services***.
