

# Wed., June 20

## Agenda:

(1) Review of the JA-SIG/Sakai conference presentations around CIPHER, and the outflow therefrom. I know the presentation Keith and I did remotely got some interest piqued in a few audience members, and I suspect some of the other presentations on the topic may have done the same.

- [ForgeRock openIDM](#) with ~~Camel~~ [OpenICF](#) & [Activiti](#) BPMN 2.0 with workflow.

(2) Sync-up around the outflow from the JA-SIG/Sakai discussions with the Registries folks. I wasn't able to attend the JA-SIG meeting, but I know Keith was present and there were a number of discussions (some rather long and whiteboard-ish, I understand) about P&I and Registries that we should make sure we're all up to speed on before plowing forward.

- SoR-to-IdReg info from Penn State's Central Person Registry team:  
<https://wikispaces.psu.edu/display/IAM/Central+Person+Registry+Design+Wiki>

(3) How best to bring in some of the folks who've expressed interest in joining the P&I effort (in one or another fashion) since the JA-SIG presentation(s).

- Celeste Copeland, UNC, IMPROV provisioning tool
- Stanford U: Provisioning systems: <http://mais.stanford.edu>

(4) What 1-3 end up meaning for how we structure our next set(s) of deliverables. I think we may have critical mass forming, in which case we need to figure out how we want to foster the chain reaction and direct the resultant energy...

(5) Please stop by <http://ciferproject.org>, have a look at the Prospectus doc and sign up to join the CIPHER all-purpose mailing list, [community@ciferproject.org](mailto:community@ciferproject.org).
