Framework for Architecture Engagement Evaluation

This is an Engagement Value matrix developed at UW-Madison in collaboration with the ITANA membership. The Value Matrix and Value Measures are shown below. A rolled-up PDF is attached.

There are several uses for this matrix at UW-Madison:

- (1) It provides a way to evaluate the various projects and engagements that architecture are involved in. We can use the matrix to evaluate which engagements are most impactful and focus our time and effort on those limiting our time and effort in the low-value engagements.
- (2) We can map an individual engagement to the various value metrics listed under both the "Business Value" and "Architectural Value" areas. This gives us a way to talk to the campus about the importance of the engagement.
- e.g. Our SOA Infrastructure (we call Application Integration Architecture) Service helps support:

Business Effectiveness through Clear and Consistent Governance, Effective Data-Driven Decisions, Optimized Processes, User/Usability Focused, Regulatory Compliance

Fiscal Efficiency through Clear Policies & Authority, Streamlined Workflows, Reducing Redundancies, Leveraging Existing

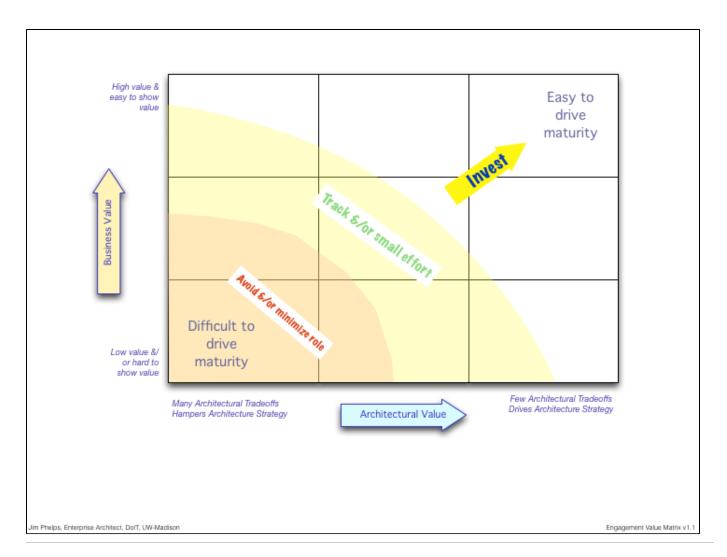

Increased Agility through Reduced Complexity, Configuration not Code, Standardized Infrastructure, Adaptable Re-usable Services, Well-known & Clear Dependencies

Architecture Strategies though Reusable & Well Leverage Infrastructure, Clear, Quick & Consistent Governance, Reduced Redundancy, Optimized Processes, Well Defined & Appropriately Sourced Data, Configuration Over Code

(3) Finally, we can map out different outcomes for a given initiative and walk through various scenarios showing how it could be more impactful based on different decisions. For example, Our Office365 Initiative might be in the "Difficult to Drive Maturity" area if we do not eliminate all of the redundant email and calendar services that are on campus, move to a common calendar solution, change process and fully leverage the system. It might move into the "Track &/or Small Effort" area if all we do is eliminate the email services on campus but don't really leverage a common calendar and the collaboration tools of the suite. Finally we could move it to "Easy to Drive Maturity" if we eliminated the email and calendars services, moved to common calendaring, leverage the suite fully.

If you use this tool or if it inspires you to create a tool for use on your campus, please share your experience and your ideas and outcomes with ITANA.

The Engagement Value Matrix:

The Value Statements:

Clear Policies & Authority Streamlined Workflows Reduced Complexity Configuration not Code Reduced Redundancies Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Adaptable Re-usable Services Timely & Appropriate Decision Making Reduced Redundancy Clear Link to Business Strategy Optimized Processes Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Adaptable Re-usable Services Timely & Appropriate Decision Making Agile Resource Alignment Well Defined & Appropriately Sourced Data Configuration Over Code Exploiting Opportunities Finding New Revenue	not Code Clear, Quick & Consistent Governance
Well defined KPIs Reducing Redundancies Rationalized Service & Project Portfolios Reduced Projects Reduced Projects Reduced Redundancy Adaptable Re-usable Services Project Portfolios Timely & Appropriate Decision Making Well Executed Projects Appropriate Outsourcing Timely Resource Alignment Well Executed Projects Appropriate Outsourcing Clear Value Statements Configuration not Code Reduced Redundancy Clear Link to Business Strategy Optimized Processes Well Executed Projects Appropriate Decision Making Well Defined & Appropriately Sourced Data Well-known & Clear Dependencies Clear value statements (commodity vs. strategic) Leveraging Partnerships Finding New Revenue *Note: these are local strategic value statements.	not Code Governance
Reducing Redundancies Standardized Infrastructure Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Reduced Redundancy Adaptable Re-usable Services Strategy Clear Link to Business Strategy Timely & Appropriate Decision Making Leveraging Existing Agile Resource Alignment Well Defined & Appropriately Sourced Data Well-known & Clear Dependencies Clear value statements (commodity vs. strategic) Leveraging Partnerships Finding New Revenue Standardized Infrastructure Reduced Redundancy Reduced Reduced Reduced Reduced Reduced Reduced Reduced Reduced Reduced Red	
Rationalized Service & Project Portfolios Adaptable Re-usable Services	frastructure Reduced Redundancy
Governance Well Executed Projects Leveraging Existing Agile Resource Alignment Well Executed Projects Agile Resource Alignment Well Defined & Appropriately Sourced Data Well-known & Clear Dependencies Clear value statements (commodity vs. strategic) Leveraging Partnerships Timely & Appropriate Decision Making Well Defined & Appropriately Sourced Data Configuration Over Code Exploiting Opportunities *Note: these are local strategic value statements.	
Decisions Leveraging Existing Agile Resource Alignment Well Defined & Appropriately Sourced Data Well-known & Clear Dependencies Clear value statements (commodity vs. strategic) Leveraging Partnerships Leveraging Partnerships Leveraging Existing Well-known & Clear Dependencies Exploiting Opportunities *Note: these are local strategic value statements.	
Appropriate Outsourcing Well-known & Clear Dependencies Clear value statements (commodity vs. strategic) Leveraging Partnerships Well-known & Clear Dependencies Exploiting Opportunities *Note: these are local strategic value statements.	Alignment Appropriately Sourced
Clear value statements (commodity vs. strategic) Leveraging Partnerships Clear value statements (commodity vs. strategic) Exploiting Opportunities *Note: these are local strategic value statements.	& Clear Configuration Over Code
Leveraging Partnerships Finding New Revenue *Note: these are local strategic value statements.
