InCommon Registrars and Comodo Certificate Manager Service

Issues InCommon is facing today;

- Comodo is setting up a testbed IdP/SP, rearchitecting CertMgr SP
- InC Ops is authoritative for admins that get access to CertMgr
- RegAuthOfficers (RAO) analogous to fed mgr site admin so it could extend to that...
- Today: InC RA (the Master RA O (angie, et al.) maintain info in two places: locally and manually input into CM.
- Manual entry could go away if we did distributed (de-)provisioning of CertMgr.
    - E.g., Change of email address.

If it works for Certificate Manger, Extend to Federation Mgr as we start to distribute the components of it; Extend to Soc2SAML gateway and its admins;

Tasks toward solution demo

- Stand up SCIM endpoints
- ...
- Profit!
