Upgrading CakePHP

Issues to Consider and Process for Upgrading CakePHP

This page details issues to consider and the process for upgrading CakePHP and is only of interest to the COmanage developers and not users or deployers.

Patch DboSource.php

As of vorsion 2.3.5 of CakePHP there is still a bug with DboSource.php. See CO 446. A patch file can be found in svn at comanage/registry/vendor /cake/patches/DboSource.patch. Bo sure to apply this when updating cake.

This no longer applies.
